Important Safety Instructions

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

Before servicing or using this equipment, obey the following warnings:

Read and understand the Service Manual before working on the machine. Failure to obey the instructions and safety warnings could cause injury to the service technician or bystanders.

DANGER To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and/or the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

• Keep bystanders and children away from the product being serviced at all times.
• Make sure that the repair is done in an appropriate work space away from foot traffic and exposure to bystanders.
• Some components of the equipment can be heavy or awkward. Enlist the service of a second person when you do maintenance steps involving these components. Do not try to do heavy or awkward steps on your own.
• Use only replacement parts and hardware that are supplied or approved by Nautilus. Failure to use Nautilus-approved replacement parts can adversely affect the safety and functionality of the equipment creating a risk to users and will void the warranty.
• Be sure that all warning stickers and instructional placards applied to the product stay present and in good condition when doing maintenance or replacing components. If necessary, request replacement warning stickers or placards from Nautilus customer service.
• Do not try to change the design or functionality of the machine being serviced as this can adversely affect user safety and will void the warranty.
• Do not put the machine back in service until all shrouds, instructions, warning labels and correct functionality have been verified and tested for correct performance.
SAFETY WARNING LABELS AND SERIAL NUMBER

FAILURE TO OBEY THESE SAFEGUARDS CAN CAUSE SERIOUS INJURY OR HEALTH PROBLEMS.

WARNING
1. Keep children and pets away from this machine at all times.
2. When this machine is not in operation, remove the Safety Key and keep out of the reach of children.
3. Use Caution when you operate this equipment or serious injury can occur.
4. Prior to use, read and understand the Owners Manual, including all Warnings.
5. To prevent injury, stand on the Foot Platforms before you start the machine.
6. This machine is for Residential use only.
7. The Maximum user Weight for this machine is 300 lbs. / 136 kgs.
8. Replace any Warning label that becomes damaged, illegible or is removed.
9. Not intended for use by anyone under 14 years of age

CAUTION ATTENTION
Unplug power cord before you move the machine.
Débranchez le cordon d’alimentation avant de déplacer la machine.

HAZARDOUS VOLTAGE.
Contact may cause electrical shock or burn.
Turn off and lock out power before servicing.

SPECIFICATIONS

Maximum User Weight: 300 lbs (136 kgs)

Power Requirements:
Operational Voltage: 120VAC 60 Hz
Operating Current: 10A max

This product, its packaging, and components contain chemicals known to the State of California to cause cancer, birth defects, or reproductive harm. This Notice is provided in accordance with California’s Proposition 65. If you would like additional information, please refer to our web site at www.nautilus.com/prop65.
Moving Your Machine
The TreadClimber® fitness machine weighs approximately 200 lbs (91 kg) when fully assembled and requires caution when being moved. Use the Transport Handle found under the front of the machine to move it. To get access to the Transport Handle, turn the Levelers until you have sufficient clearance between the machine and floor.

Your machine can be rolled on the transport wheels to a new location. Lower your machine slowly into its new location without injury to your head or fingers.

⚠️ Do not use the uprights, handlebars, or the Console to lift or move the machine. Injury to you or damage to the machine can occur.

The machine may be moved by one or more persons depending on their physical abilities and capacities. Make sure that you and others are all physically fit and able to move the machine safely.

Place the machine on a clean, hard, level surface, free from unwanted material or other objects that may hamper your ability to move freely. A rubber mat should be used below the machine to prevent the release of static electricity and protect your flooring.

For safe storage of the machine and to prevent unsupervised operation of the machine always remove the Safety Key and disconnect the power cord from the wall outlet and the AC input. Place the power cord in a secure location.

Leveling Your Machine
Levelers are found on the front of the TreadClimber® machine. Make sure the TreadClimber® machine is level and stable before you exercise. To adjust:

1. Loosen the upper locking nut.
2. Turn the leveler to adjust the height.
3. Tighten the upper locking nut to lock the leveler.

⚠️ Do not adjust the levelers to such a height that they detach or unscrew from the machine. Injury to you or damage to the machine can occur.
MAINTENANCE

Read all maintenance instructions fully before you start any repair work. In some conditions, an assistant is required to do the necessary tasks.

⚠️ Equipment must be regularly examined for damage and repairs. The owner is responsible to make sure that regular maintenance is done. Worn or damaged components must be repaired or replaced immediately. Only manufacturer supplied components can be used to maintain and repair the equipment.

⚠️ DANGER To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and/or the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

Daily: Before each use, inspect for loose, broken, damaged, or worn parts. Do not use the machine if any of these conditions exist. Use a dry cloth to wipe off any perspiration after each use.

Weekly: Check for smooth roller operation. Clean the machine to remove dust, dirt, or grime. Clean the top of the belt with a slightly damp, soapy cloth and wipe carefully and thoroughly with a dry cloth. Do not let any liquid get below the belts or into the Base Frame.

Monthly: Make sure all bolts and screws are tight. Tighten if necessary.

NOTICE: Do not clean with a petroleum based solvent or an automotive cleaner. Be sure to keep the Console free of moisture.

Walking Belt and Deck Lubrication

The TreadClimber® machine is equipped with a low maintenance deck and belt system. Belt friction can affect the function and life of the machine. Your TreadClimber® fitness machine came with a starter supply of lubrication for the belts.

Lubrication Schedule

<table>
<thead>
<tr>
<th>User Level</th>
<th>Total Workout Hours per Week</th>
<th>When to Lubricate</th>
</tr>
</thead>
<tbody>
<tr>
<td>Light</td>
<td>less than 3 hours</td>
<td>every 3 months</td>
</tr>
<tr>
<td>Moderate</td>
<td>3 to 5 hours</td>
<td>every 2 months</td>
</tr>
<tr>
<td>Heavy</td>
<td>5 or more hours</td>
<td>every month</td>
</tr>
</tbody>
</table>

We recommend that you use one of the following:
• Lube-N-Walk® Treadmill Lubrication Kit (available from www.bowflex.com or your local specialty fitness dealer)
• 100% pure silicone, available at most hardware and auto parts stores.

As you use your fitness machine, the Console will show “LUbE” at set times. This is only a reminder and should be added to your inspection schedule. Only apply lubricant as necessary. Push the START button to accept the reminder.

For the best results lubricate the Treadles periodically with a silicone lubricant, using the following instructions:

1. Unplug the machine fully from the wall outlet, and remove the power cord from the machine. Place the power cord in a secure location.
2. Carefully lift each belt and apply silicone lubricant in the center of the Treadle deck along the entire reachable length of the deck. Apply 0.5 to 1.5 oz. of the lubricant on the deck underneath each belt.

    **NOTICE:** Always use a 100% pure silicone lubricant. Do not use a degreaser like WD-40® or a petroleum based product as this could seriously impact performance.

    **Note:** The Walking Belts may need to be loosened to allow for access during lubrication. Consult the "Adjusting the Walking Belts" procedure if necessary.

3. Connect the power cord back into the machine and then into the wall outlet.

4. Stay to one side of your machine.

5. Switch on your machine and start the belts at the slowest speed. Let the belts operate for approximately 15 seconds.

6. Switch off your machine.

7. Take care to clean up any excess lubricant from the Treadles. We also recommend a periodic inspection of the Treadle surfaces below the belts. If the decks appear worn, contact a TreadClimber Representative (refer to the Contacts section of this manual).

   **To decrease the possibility of slipping, be sure the Treadle area is free from grease or oil. Clean off any excess oil from the machine surfaces.**
Walking Belt Alignment
The walking belts need to be adjusted if they are out of center enough to cause a rubbing or scraping sound. Adjustments can be made at the Front Roller of each Treadle.

Adjusting the Walking Belts – While operating the machine, notice where the belts run on each Treadle. The Walking Belt Adjustment Bolts are on the front end of each Roller. If the belt is tracking too far to the right, use a properly sized Hex Key to turn the right adjustment bolt clockwise on that belt in full turn increments. If the belt tracks too far to the left, do the same thing on the left adjustment bolt.

Note: Do not turn the bolts counterclockwise when you adjust the belt alignment.

Belt Tension Check – Check the belt tension only when the machine is unplugged. From the belt’s midpoint, a correctly tensioned belt should only have an inch of give. To check, pull the belt upward at its midpoint and measure the distance to the deck. If the distance is more than an inch, the belt is loose. To tighten, turn both Walking Belt Adjustment Bolts clockwise one-half a turn and check tension again. Repeat this step if necessary.

Note: Bolts are turned counterclockwise equally to decrease belt tension.

</tbody>
</table>
If the error code has never appeared before, the first step should always be to power the machine off/on, and see if the code re-appears. If the code re-appears, or has been seen before, then proceed with the steps below.

After completion of each resolution step, restart the machine and see if the error returns. If not, proceed to the next resolution step. If issue persists, after all steps followed, contact Customer Service for advanced troubleshooting assistance.

If multiple codes are present attempt to resolve “Hxx” code before troubleshooting “Cxx” codes. After “Hxx” codes are resolved “Cxx” codes may not re-appear.

| **H12. Memory Initialization failed** | Software update failed or MCB is not programmed | 1. Restart the device. Does issue still occur?  
-If YES, replace the MCB.  
-If NO, contact Customer Service. | |
| **H13. Hardware Failure** | MCB detected that one of the main hardware components has failed or is not working properly. | 1. Does this occur all the time?  
-If YES, Check all wirings. Replace MCB.  
2. Contact Customer Service and file an Advanced Troubleshooting Form. | 8, 10, 15 |
| **H15. Over Current** | MCB Saw excessive current during workout that could potentially damage the motor or heat up | 1. Does this issue happen without the user on the machine?  
If Yes:  
-Check the motor wiring and Inlet wiring.  
-Replace Motor.  
-Replace MCB.  
If NO:  
-user weights between 200-300 at lower speeds of 0.5-2.0 MPH?  
Then lube the Belt, increase shock settings (less travel), and increase speed. | 8, 10, 15 |

Level I: Low - very little mechanical knowledge or exposure.
Level II: Intermediate - some experience with mechanical procedures
Level III: Advanced - knowledgeable about mechanical procedures
Replacing the Bezel Electronics Assembly on the TC20 fitness machine

Skill Level: I

If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

Important Safety Instructions - Before servicing or using this equipment, obey the following warnings:

- Read and understand the Part Replacement Procedure before working on the machine. Failure to obey the instructions and safety warnings could cause injury to the service technician or bystanders.
- Keep bystanders and children away from the product being serviced at all times.
- Make sure that the repair is done in an appropriate work space away from foot traffic and exposure to bystanders.
- Disconnect all power and allow to sit for 5 minutes before you service this machine.
- Some components of the equipment can be heavy or awkward. Enlist the service of a second person when you do maintenance steps involving these components. Do not try to do heavy or awkward steps on your own.
- If replacement parts are necessary, use only genuine Nautilus replacement parts and hardware. Failure to use genuine replacement parts can cause a risk to users, keep the machine from operating correctly and will void the warranty.
- Be sure that all warning stickers and instructional placards applied to the product stay present and in good condition when doing maintenance or replacing components. If necessary request replacement warning stickers or placards from Nautilus customer service.
- Do not try to change the design or functionality of the machine being serviced as this can adversely effect user safety.
- Do not use the machine until all shrouds, instructions, warning labels and correct functionality have been verified and tested for correct performance.
- This product contains magnets. Magnetic fields can interfere with the normal use of certain medical devices at a close range. Users may come into proximity of the magnets in the assembly, maintenance, and/or use of the product. Given the obvious importance of these devices, such as a pacemaker, it is important that you consult with your medical provider in connection with the use of this equipment. Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

Tools Required (not included)

#2 Phillips screwdriver
To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

1. Remove the indicated Phillips head screw and the Console Access Panel.

2. Disconnect the Upper Input/Output (I/O) Cable.

3. Remove the 4 indicated Phillips head screws securing the Bezel Electronics Assembly to the Console Shroud.

4. Carefully remove the Bezel Electronics Assembly from the front of the Console Shroud.

5. Install the new Bezel Electronics Assembly.

6. Reinstall the 4 Phillips head screws.

7. Connect the Upper I/O Cable.

8. Replace the Console Access Panel and secure with the Phillips head screw.

9. Final Inspection

   Inspect your machine to ensure that all hardware is tight and components are properly assembled.

   Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
Replacing the Console Assembly / Console Shroud on the TC20 fitness machine

NOTICE: This document provides instructions for the replacement of the Console Assembly / Console Shroud on the Bowflex® TC20 fitness machine. If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

#2 Phillips screwdriver
To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

1. Remove the 2 indicated screws from the Rear Cover using a #2 Phillips screwdriver.

2. Remove the Rear Cover.

3. Using a #2 Phillips screwdriver, remove the two indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.

**Note:** The Motor Control Board is located under the right Treadle.

![Motor Control Board Diagram]

5. Using a #2 Phillips screwdriver, detach the Grounding Wire from the Base Assembly. Push the loose wires through to the Motor compartment.

6. With assistance, carefully set the machine on to the right side.

![Warning: Move Machine with Care]

7. Remove the 4 indicated screws from the A/C Inlet housing using a #2 Phillips screwdriver.

8. Remove the A/C Inlet, pulling the detached wires from the Control Board compartment.

9. From the new A/C Inlet, push the Grounding and Motor Power Wires into the Control Board compartment.

10. Attach the Motor Power Wires and the Grounding Wire to the Control Board.

11. Attach the new A/C Inlet using a #2 Phillips screwdriver. **Note:** Do not crimp any wires.

12. Attach the Motor Cover using the #2 Phillips screwdriver.

13. Attach the Rear Cover using the #2 Phillips screwdriver.

14. Final Inspection

Inspect your machine to ensure that all hardware is tight and components are properly assembled.

![Final Inspection Warning]

**Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.**
Replacing the Drive Belt on the TC20 fitness machine

Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

**Tools Required (not included)**

- #2 Phillips screwdriver
1. Remove the 2 indicated screws from the Rear Cover using a #2 Phillips Screwdriver.

2. Remove the Rear Cover.

3. Using a #2 Phillips screwdriver, remove the two indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.

4. Using a #2 Phillips screwdriver, remove the 3 indicated screws from the left Pivot Cover.

5. Remove the left Pivot Cover and Spacer.

To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.
6. Tilt unit carefully onto the right side.

Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

7. Remove the lower mounting bolt from the left Cylinder. Leave attached at top.

8. Remove the 5 indicated screws using a #2 Phillips screwdriver from the left Side Cover.

9. Remove the left Side Cover.

10. Turn the Drive Pulley clockwise while forcing the Drive Belt to the outside. Belt will come off of the Drive and Motor Pulley.

Keep fingers out of any pinch opportunities when turning the Pulleys.

11. Wrap the new Drive Belt around the Motor Pulley. Start the Drive Belt on the Drive Pulley and roll it in a clockwise motion. Be sure the Belt does not come off of the Motor Roller.

Keep fingers out of any pinch opportunities when turning the Pulleys.

12. Roll the Drive Pulley clockwise until the Drive Belt is fully installed. Continue to roll the Belt forward while adding side pressure with fingers to align as necessary.

13. Replace the Side Cover and secure with side cover screws.

14. Reconnect Cylinder and secure with Cylinder mounting bolt.

15. With assistance, carefully set the machine upright.

Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

16. Replace Spacer, Pivot Cover, and screws.

17. Replace the Motor Cover and secure with screws.

18. Replace Rear Cover and secure with screws.

19. Final Inspection

Inspect your machine to ensure that all hardware is tight and components are properly assembled.

Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
Replacing the Motor on the TC20 fitness machine

Tools Required (not included)

#2 Phillips screwdriver

5mm wrench
To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

1. Using a #2 Phillips screwdriver, remove the 2 indicated bolts from the Rear Cover.

2. Remove the Rear Cover.

3. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.

4. Using a #2 Phillips screwdriver, remove the 3 indicated screws from the left Pivot Cover.

5. Remove the left Pivot Cover and Spacer.
6. Remove the 5 indicated screws using a #2 Phillips screwdriver from the left Side Cover.

7. Slide the left Side Cover off of the machine.

**Note:** The Motor Control Board is located under the right Treadle.

9. Remove the Drive Belt. Turn the Drive Pulley clockwise while forcing the Drive Belt to the outside. Belt will come off of the Drive and Motor Pulley.

⚠️ Keep fingers out of any pinch opportunities when turning the Pulleys.
10. Remove the indicated nuts and washers using a 5 mm wrench from the Motor Assembly. There are two in front (shown) and two behind (not shown) the Motor Assembly.

11. Disconnect the Tach Cable from the Motor Control Board.

12. Remove and replace with the new Motor.
13. Installation is the reverse procedure.

**Drive Belt Replacement:**
Wrap the new Drive Belt around the Motor Pulley. Start the Drive Belt on the Drive Pulley and roll it in a clockwise motion. Be sure the Belt does not come off of the Motor Roller.

⚠ Keep fingers out of any pinch opportunities when turning the Pulleys.

Roll the Drive Pulley clockwise until the Drive Belt is fully installed. Continue to roll the Belt forward while adding side pressure with fingers to align as necessary.

14. Final Inspection
Inspect your machine to ensure that all hardware is tight and components are properly assembled.

⚠ Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
Replacign the Treadle Assembly on the TC20 fitness machine

NOTICE: This document provides instructions for the replacement of the Treadle Assembly on the Bowflex® TC20 fitness machine. If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

Tools Required (not included)

- #2 Phillips screwdriver

- 13mm (1/2”) wrench
1. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Rear Cover.

2. Remove the Rear Cover.

3. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.

5. Remove the lower mounting bolt from the Cylinders. Leave the tops attached.

6. Disconnect the Cylinder from the Treadle, and lower the Treadle gently.

   The Treadle will fall abruptly if not supported. Keep hands away from the inside of the Treadles to avoid possible serious injury.

7. Using a 13 mm (1/2") wrench, remove the indicated bolts from both sides of the Treadle Assembly.

8. Carefully lift the front of the Treadle Assembly onto the Transport Wheels. Roll the Treadle Assembly off of the rear of the machine.

   **Note:** THIS STEP REQUIRES TWO PEOPLE.

   Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

   The Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the edges of the Walking Belts.

9. Installation is the reverse procedure.

10. Final Inspection

    Inspect your machine to ensure that all hardware is tight and components are properly assembled.

    Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

Important Safety Instructions - Before servicing or using this equipment, obey the following warnings:

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

- Read and understand the Part Replacement Procedure before working on the machine. Failure to obey the instructions and safety warnings could cause injury to the service technician or bystanders.
- Keep bystanders and children away from the product being serviced at all times.
- Make sure that the repair is done in an appropriate work space away from foot traffic and exposure to bystanders.
- Disconnect all power and allow to sit for 5 minutes before you service this machine.
- Some components of the equipment can be heavy or awkward. Enlist the service of a second person when you do maintenance steps involving these components. Do not try to do heavy or awkward steps on your own.
- If replacement parts are necessary, use only genuine Nautilus replacement parts and hardware. Failure to use genuine replacement parts can cause a risk to users, keep the machine from operating correctly and will void the warranty.
- Be sure that all warning stickers and instructional placards applied to the product stay present and in good condition when doing maintenance or replacing components. If necessary request replacement warning stickers or placards from Nautilus customer service.
- Do not try to change the design or functionality of the machine being serviced as this can adversely effect user safety.
- Do not use the machine until all shrouds, instructions, warning labels and correct functionality have been verified and tested for correct performance.
- This product contains magnets. Magnetic fields can interfere with the normal use of certain medical devices at a close range. Users may come into proximity of the magnets in the assembly, maintenance, and/or use of the product. Given the obvious importance of these devices, such as a pacemaker, it is important that you consult with your medical provider in connection with the use of this equipment. Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

Tools Required (not included)

#2 Phillips screwdriver
To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

1. Using a #2 Phillips Screwdriver, remove the 2 indicated screws from the Rear Cover.

2. Remove the Rear Cover.

3. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.

4. Using a #2 Phillips screwdriver, remove the 3 indicated screws from the right Pivot Cover.

5. Remove the right Pivot Cover and Spacer.
6. Tilt unit carefully onto the left side.

⚠️ Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

7. Remove the lower Cylinder mounting bolt and disconnect the Cylinder. Leave it attached at the top.

8. Remove the 5 indicated screws using a #2 Phillips screwdriver from the right Side Cover.

9. Remove the right Side Cover.

10. Record the location of where each wire connects to the Control Board. You will have to reattach each wire to the new Control Board.

11. Disconnect the Motor Power Wires noting their location.

12. Disconnect the Tach Cable (or Step Sensor Cable) and Fan Power Wires (if present) noting their location.

13. Disconnect the AC Power Wires noting their location.

14. Disconnect the Tach Cable from the Motor Control Board.

15. Carefully remove the two indicated screws from the Motor Control Board.
16. Remove the Motor Control Board and replace.

17. Re-install the two Phillips head screws into the new Motor Control Board.

19. Connect the Tach Cable. **Note:** If present, the Motor Fan is not used for the operation of the machine. The Fan Power Wires should not be connected to the new Motor Control Board. If desired, the Fan Assembly can be removed from the machine. Otherwise, be sure to place the Wires away from the Motor Control Board.

20. Connect Motor Power Wires. **Note:** Red wire connects to terminal labeled “M+RED”. Black wire connects to terminal labeled “M-BLK”.

21. Connect the I/O Cable to the Motor Control Board.

22. Replace the right Side Cover and screws.

23. Connect the Cylinder and secure with the lower Cylinder mounting bolt.

24. With assistance, carefully set the machine upright. **Caution:** Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

25. Replace the right Pivot Cover, the Motor Cover, and the Rear Cover.

26. Replace Power Cord and test machine for proper operation. NO CALIBRATION IS NECESSARY for this model.

27. Final Inspection

Inspect your machine to ensure that all hardware is tight and components are properly assembled. **Caution:** Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
Replacing a Walking Deck on the TC20 fitness machine

NOTICE: This document provides instructions for the replacement of a Walking Deck on the Bowflex® TC20 fitness machine.

If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

Important Safety Instructions - Before servicing or using this equipment, obey the following warnings:

Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

Tools Required (not included)

#2 Phillips screwdriver

5 mm hex wrench
1. Unplug the power cord from the machine and wait 5 minutes.

2. Using a #2 Phillips Screwdriver, remove the 2 indicated screws from the Rear Cover.

3. Remove the Rear Cover.

4. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.

5. Using a #2 Phillips screwdriver, remove the 3 indicated screws from the right Pivot Cover.

6. Remove the right Pivot Cover and Spacer.

⚠️ DANGER ⚠️
To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.
7. Tilt the machine carefully onto the right side.

⚠️ Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

8. Using the 5 mm hex wrench, remove the lower mounting bolt from the Cylinder.

9. Disconnect the Cylinder from the Treadle indicated by the arrow. Leave the top attached.

10. Using a #2 Phillips screwdriver, remove the 5 indicated screws from the Side Cover.

11. Slide the Side Cover off of the machine.

12. Using the 5 mm hex wrench, loosen the Belt Tensioning Screws on both Treadles (2 screws on each Treadle).

**Note:** Be sure to record how many turns it takes to loosen the screws to assist with reassembly.

13. Using a #2 Phillips screwdriver, remove the 6 indicated screws from each of the Foot Support Platforms.

14. With assistance, carefully set the machine upright.

⚠️ Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.
15. With the Walking Belt loose, shift the belt to the center of the machine and remove the 3 deck screws and 1 belt guide screw using a #2 Phillips screwdriver.

16. Shift the belt to the outside and remove the 4 deck screws using a #2 Phillips screwdriver.

17. Lift the belt slightly and slide the Walking Deck out from under the belt.

18. Slide the new deck in with the laminated side facing up.

19. Repeat procedure on the other side of machine if replacing both Walking Decks.

20. Installation is the reverse procedure.
21. With the Belt Tensioning Screws and Brackets replaced, check the walking belt tension. To check, pull the belt upward at its midpoint and measure the distance to the deck.

If the distance is more than an inch, the belt is loose. To tighten, turn both bolts clockwise one-half a turn and check tension again. Repeat this step if necessary. Be sure not to over-tighten the belts.

22. Inspect the alignment of the Walking Belts. If the belt is tracking too far on a side, turn the Belt Tensioning Screw on that side a full turn.

23. Plug in the fitness machine into an appropriately rated outlet.

**Note:** The TC20 TreadClimber® fitness machine is designed to plug directly into a properly wired and grounded three prong 120V outlet. If you connect the machine to an outlet with GFI (ground fault interrupt) or AFI (arc fault interrupt), machine operation can cause the circuit to trip.

24. Standing adjacent to the machine, turn on the belts and run at 1.5 mph for about a minute.

25. Inspect the alignment. If necessary, continue to adjust the Belt Tensioning Screw until aligned.

26. Final Inspection

Inspect your machine to ensure that all hardware is tight and components are properly assembled.

⚠️ Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
Replacing the Front Roller on the TC20 fitness machine

Skill Level: II

This document provides instructions for the replacement of the Front Roller on the Bowflex® TC20 fitness machine.

If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

NOTICE: This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

Important Safety Instructions - Before servicing or using this equipment, obey the following warnings:

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

- Read and understand the Part Replacement Procedure before working on the machine. Failure to obey the instructions and safety warnings could cause injury to the service technician or bystanders.
- Keep bystanders and children away from the product being serviced at all times.
- Make sure that the repair is done in an appropriate work space away from foot traffic and exposure to bystanders.
- Disconnect all power and allow to sit for 5 minutes before you service this machine.
- Some components of the equipment can be heavy or awkward. Enlist the service of a second person when you do maintenance steps involving these components. Do not try to do heavy or awkward steps on your own.
- If replacement parts are necessary, use only genuine Nautilus replacement parts and hardware. Failure to use genuine replacement parts can cause a risk to users, keep the machine from operating correctly and will void the warranty.
- Be sure that all warning stickers and instructional placards applied to the product stay present and in good condition when doing maintenance or replacing components. If necessary request replacement warning stickers or placards from Nautilus customer service.
- Do not try to change the design or functionality of the machine being serviced as this can adversely effect user safety.
- Do not use the machine until all shrouds, instructions, warning labels and correct functionality have been verified and tested for correct performance.
- This product contains magnets. Magnetic fields can interfere with the normal use of certain medical devices at a close range. Users may come into proximity of the magnets in the assembly, maintenance, and/or use of the product. Given the obvious importance of these devices, such as a pacemaker, it is important that you consult with your medical provider in connection with the use of this equipment. Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

Tools Required (not included)

- #2 Phillips screwdriver
- 5mm wrench
To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

1. Using a #2 Phillips Screwdriver, remove the 2 indicated screws from the Rear Cover.

2. Remove the Rear Cover.

3. Using a #2 Phillips screwdriver, remove the 3 indicated screws from the left Pivot Cover.

4. Remove the Pivot Cover and Spacer.

5. Tilt the machine carefully onto the right side.

   Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

6. Remove the lower mounting bolt from the Cylinder. Leave attached at top.

7. Disconnect the Cylinder from the Treadle.

8. Using a #2 Phillips screwdriver, remove the 5 indicated screws from the Side Cover.

9. Slide the Side Cover off of the machine.
10. Remove the Belt Tensioning Screws and Brackets using a 5 mm hex wrench.

**NOTE:** Be sure to record how many turns it takes to remove the screws to assist with reassembly. Also note the orientation of the Brackets. The larger Bracket is to the outside of the machine.

11. Remove the Front Roller by sliding it out of the belt.

12. Installation is the reverse procedure. Be sure to tension belts properly after reassembly following the procedures in the Owner's manual.

**Walking Belt Adjustment**

The walking belts need to be adjusted if they are out of center enough to cause a rubbing or scraping sound. Adjustments can be made at the Front Roller of each Treadle (Item A).

**Belt Alignment Check**  — Stand adjacent to the unit and set the speed to 1.5 MPH. The alignment adjustment bolts are on the front end of each Roller. If the belt is tracking too far to the right, use a 5 mm Hex Key to turn the right adjustment bolt clockwise on that belt in full turn increments. If the belt tracks too far to the left, do the same thing on the left adjustment bolt.

**Note:** Do not turn the bolts counterclockwise when you adjust the belt alignment.

**Belt Tension Adjustment**  — Check the belt tension only when the machine is unplugged. From the belt’s midpoint, a correctly tensioned belt should only have an inch of give. To check, pull the belt upward at it's midpoint and measure the distance to the deck. If the distance is more than an inch, the belt is loose. To tighten, turn both bolts clockwise one-half a turn and check tension again. Repeat this step if necessary. Be sure not to over-tighten the belts.

**Note:** Bolts are turned counterclockwise equally to decrease belt tension.

13. Final Inspection

Inspect your machine to ensure that all hardware is tight and components are properly assembled.

**Warning:** Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
Replacing the Rear Roller on the TC20 fitness machine

Skill Level: III

NOTICE: This document provides instructions for the replacement of the Rear Roller on the Bowflex® TC20 fitness machine. If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

- Be sure that all warning stickers and instructional placards applied to the product stay present and in good condition when doing maintenance or replacing components. If necessary request replacement warning stickers or placards from Nautilus customer service.
- Do not try to change the design or functionality of the machine being serviced as this can adversely effect user safety.
- Do not use the machine until all shrouds, instructions, warning labels and correct functionality have been verified and tested for correct performance.
- This product contains magnets. Magnetic fields can interfere with the normal use of certain medical devices at a close range. Users may come into proximity of the magnets in the assembly, maintenance, and/or use of the product. Given the obvious importance of these devices, such as a pacemaker, it is important that you consult with your medical provider in connection with the use of this equipment. Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

Tools Required (not included)

- #2 Phillips screwdriver
- 13mm (1/2”) socket and wrench
- 5mm wrench
- 13mm (1/2”) wrench
- Eye Protection
**DANGER** To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

**Note:** This procedure is shown with the Treadle Assembly removed from the machine. This is not necessary to complete the procedure.

1. Using a #2 Phillips screwdriver, remove the 3 indicated screws from the right Pivot Cover.

2. Remove the right Pivot Cover and Spacer.

3. Remove the 5 indicated screws using a #2 Phillips screwdriver from the left Side Cover.

4. Slide the left Side Cover off of the machine.

5. Remove the Drive Belt. Turn the Drive Pulley clockwise while forcing the Drive Belt to the outside. Belt will come off of the Drive and Motor Pulley.
6. While holding a 13 mm (1/2") wrench on the Right Rear Roller Bolt steady, turn another 13 mm (1/2") wrench on the Drive Pulley Bolt counter-clockwise. Remove the Drive Pulley.

![Image of Drive Pulley Bolt and Right Rear Roller Bolt](image1)

7. Loosen the Belt Tensioning Screws on both Treadles using a 5 mm hex wrench (total of 4 screws).

**NOTE:** Be sure to record how many turns it takes to loosen the screws to assist with reassembly.

![Image of Belt Tensioning Screws](image2)

8. Remove the 3 indicated bolts from the Left Side Bearing Plate and Rear Plate using two 13 mm (1/2") wrenches.

![Image of Left Side Bearing Plate and Rear Plate](image3)

9. Remove the Left Side Bearing Plate.

![Image of Left Side Bearing Plate and Rear Plate](image4)
10. Remove the Snap Rings from both sides of the Rear Roller.

⚠️ To avoid possible injury, be sure to wear eye protection before removing the Snap Ring.

**Note:** The Snap Ring may be behind the Right Side Bearing Plate on some machines. If it is behind, remove the Right Side Bearing Plate before attempting to remove the Snap Ring.

11. Using a 13 mm (1/2") wrench and a 13 mm (1/2") socket and wrench, remove the 2 indicated bolts from the Left Rear Roller Bracket.

12. Remove the Left Rear Roller Bracket.

13. Slide the Rear Roller out of the belts.

14. Remove and replace with the new Rear Roller.

15. Assembly is the reverse procedure. Consult the Replace the Drive Belt procedure.
Walking Belt Adjustment
The walking belts need to be adjusted if they are out of center enough to cause a rubbing or scraping sound. Adjustments can be made at the Front Roller of each Treadle (Item A).

Belt Alignment Check – Stand adjacent to the unit and set the speed to 1.5 MPH. The alignment adjustment bolts are on the front end of each Roller. If the belt is tracking too far to the right, use a 5 mm Hex Key to turn the right adjustment bolt clockwise on that belt in full turn increments. If the belt tracks too far to the left, do the same thing on the left adjustment bolt.

Note: Do not turn the bolts counterclockwise when you adjust the belt alignment.

Belt Tension Adjustment – Check the belt tension only when the machine is unplugged. From the belt’s midpoint, a correctly tensioned belt should only have an inch of give. To check, pull the belt upward at its midpoint and measure the distance to the deck. If the distance is more than an inch, the belt is loose. To tighten, turn both bolts clockwise one-half a turn and check tension again. Repeat this step if necessary. Be sure not to over-tighten the belts.

Note: Bolts are turned counterclockwise equally to decrease belt tension.

16. Final Inspection
Inspect your machine to ensure that all hardware is tight and components are properly assembled.

⚠️ Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner's Manual.
Replacing a Walking Belt on the TC20 fitness machine

**NOTICE:** This document provides instructions for the replacement of a Walking Belt on the Bowflex® TC20 fitness machine. If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

**Important Safety Instructions - Before servicing or using this equipment, obey the following warnings:**

- Read and understand the Part Replacement Procedure before working on the machine. Failure to obey the instructions and safety warnings could cause injury to the service technician or bystanders.
- Keep bystanders and children away from the product being serviced at all times.
- Make sure that the repair is done in an appropriate work space away from foot traffic and exposure to bystanders.
- Disconnect all power and allow to sit for 5 minutes before you service this machine.
- Some components of the equipment can be heavy or awkward. Enlist the service of a second person when you do maintenance steps involving these components. Do not try to do heavy or awkward steps on your own.
- If replacement parts are necessary, use only genuine Nautilus replacement parts and hardware. Failure to use genuine replacement parts can cause a risk to users, keep the machine from operating correctly and void the warranty.
- Be sure that all warning stickers and instructional placards applied to the product stay present and in good condition when doing maintenance or replacing components. If necessary request replacement warning stickers or placards from Nautilus customer service.
- Do not try to change the design or functionality of the machine being serviced as this can adversely effect user safety.

- This product contains magnets. Magnetic fields can interfere with the normal use of certain medical devices at a close range. Users may come into proximity of the magnets in the assembly, maintenance, and/or use of the product. Given the obvious importance of these devices, such as a pacemaker, it is important that you consult with your medical provider in connection with the use of this equipment. Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

**Tools Required (not included)**

- #2 Phillips screwdriver
- Eye protection
- (2) 13 mm (1/2”) wrenches
- 5 mm hex wrench
- Cir-Clip Pliers
1. Using a #2 Phillips Screwdriver, remove the 2 indicated screws from the Rear Cover.

2. Remove the Rear Cover.

3. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.

4. Using a #2 Phillips screwdriver, remove the 3 indicated screws from the right Pivot Cover.

5. Remove the right Pivot Cover and Spacer.

To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.
6. Using a #2 Phillips screwdriver, remove the 5 indicated screws from the left Side Cover.

7. Using a 5 mm hex wrench, remove the lower mounting bolt from the Cylinder. Leave it attached at the top.

8. Disconnect the Cylinder from the Treadle, and lower the Treadle gently.

⚠️ The Treadle will fall abruptly if not supported. Keep hands away from the inside of the Treadles to avoid possible serious injury.

9. Slide the Side Cover off of the machine.

10. Reconnect the Cylinder to the Treadle and re-install the lower mounting bolt. Repeat the previous five steps to the right side of the machine.

11. Using a #2 Phillips screwdriver, remove the 4 bolts holding the Treadle Stop to the Left Treadle. There are two bolts on each side of the Treadle.

12. Remove the Treadle Stop.

13. Remove the Drive Belt. Turn the Drive Pulley clockwise while forcing the Drive Belt to the outside. Belt will come off of the Drive and Motor Pulley.

⚠️ Keep fingers out of any pinch opportunities when turning the Pulleys.
14. Using a 5 mm hex wrench, remove the Belt Tensioning Screws and Brackets from the Front Roller.

NOTE: Be sure to record how many turns it takes to remove the screws to assist with reassembly. Also note the orientation of the Brackets. The larger Bracket is to the outside of the machine.

15. Remove the Front Roller from the belt.

16. While holding a 13 mm (1/2”) wrench on the Right Rear Roller Bolt steady, turn another 13 mm (1/2”) wrench on the Drive Pulley Bolt counter-clockwise. Remove the Drive Pulley.

17. Remove the 2 bolts from the Rear Plate using a 5 mm hex wrench.

18. Remove the 2 bolts from the Left Side Bearing Plate using two 13 mm (1/2”) wrenches.
19. Using Cir-Clip Pliers, remove the Snap Ring from the Rear Roller Assembly.

⚠️ To avoid possible injury, be sure to wear eye protection before removing the Snap Ring.

20. Using a 13 mm (1/2”) wrench and a 13 mm (1/2”) socket, remove the 2 indicated bolts from the Left Side Bearing Plate.

21. Remove the Left Rear Roller Bracket from the Rear Roller.

22. Remove the lower Cylinder bolt using a 5 mm hex wrench.

23. Disconnect the Cylinder from the Treadle, and lower the Treadle gently.

⚠️ The Treadle will fall abruptly if not supported. Keep hands away from the inside of the Treadles to avoid possible serious injury.

24. Carefully slide the Walking Belt off of the deck.

25. Follow the same procedure for replacing the right Walking Belt.

26. Installation is the reverse procedure.
27. With the Belt Tensioning Screws and Brackets replaced, check the walking belt tension. To check, pull the belt upward at its midpoint and measure the distance to the deck. If the distance is more than an inch, the belt is loose. To tighten, turn both bolts clockwise one-half a turn and check tension again. Repeat this step if necessary. Be sure not to overtighten the belts.

28. Inspect the alignment of the Walking Belts. If the belt is tracking too far on a side, turn the Belt Tensioning Screw on that side a full turn.

29. Plug in the fitness machine into an appropriately rated outlet. **Note:** The TC20 TreadClimber® fitness machine is designed to plug directly into a properly wired and grounded three prong 120V outlet. If you connect the machine to an outlet with GFI (ground fault interrupt) or AFI (arc fault interrupt), machine operation can cause the circuit to trip.

30. Standing adjacent to the machine, turn on the belts and run at 1.5 mph for about a minute.

31. Inspect the alignment. If necessary, continue to adjust the Belt Tensioning Screw until aligned.

32. Final Inspection
Inspect your machine to ensure that all hardware is tight and components are properly assembled.

⚠️ Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
Replacing the Virtual Pivot on the TC20 fitness machine

NOTICE: This document provides instructions for the replacement of the Virtual Pivot on the Bowflex® TC20 fitness machine.

If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

Important Safety Instructions - Before servicing or using this equipment, obey the following warnings:

- This product contains magnets. Magnetic fields can interfere with the normal use of certain medical devices at a close range. Users may come into proximity of the magnets in the assembly, maintenance, and/or use of the product. Given the obvious importance of these devices, such as a pacemaker, it is important that you consult with your medical provider in connection with the use of this equipment. Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

Tools Required (not included)

- #2 Phillips screwdriver
- (2) 13mm (1/2") wrench
- 5mm hex wrench
1. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Rear Cover.

2. Remove the Rear Cover.

3. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.

---

**DANGER**

To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.
5. Remove the lower mounting bolt from the Cylinders. Leave the tops attached.

6. Disconnect the Cylinder from the Treadle, and lower the Treadle gently.

⚠️ The Treadle will fall abruptly if not supported. Keep hands away from the inside of the Treadles to avoid possible serious injury.

7. Using a 13 mm (1/2”) wrench, remove the indicated bolts from both sides of the Treadle Assembly.

8. Carefully lift the front of the Treadle Assembly onto the Transport Wheels. Roll the Treadle Assembly off of the rear of the machine.

**Note:** THIS STEP REQUIRES TWO PEOPLE.

⚠️ Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

⚠️ The Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the edges of the Walking Belts.
9. Using a #2 Phillips screwdriver, remove the 3 indicated screws from the right Pivot Cover.

10. Remove the right Pivot Cover and Spacer.

11. Remove the 5 indicated screws using a #2 Phillips screwdriver from the left Side Cover.

12. Slide the left Side Cover off of the machine.

13. Remove the Drive Belt. Turn the Drive Pulley clockwise while forcing the Drive Belt to the outside. Belt will come off of the Drive and Motor Pulley.

⚠️ Keep fingers out of any pinch opportunities when turning the Pulleys.
14. While holding a 13 mm (1/2”) wrench on the Right Rear Roller Bolt steady, turn another 13 mm (1/2”) wrench on the Drive Pulley Bolt counter-clockwise. Note the orientation of the Drive Pulley with the Round Magnet on the inside.

15. Remove the 3 indicated bolts from the Side Bearing Plate and Rear Plate using two 13 mm (1/2”) wrenches. Repeat on other side of machine.

16. Remove the Side Bearing Plates and Rear Plate from the Bearing.
17. Remove the 4 indicated screws using two 13 mm (1/2") wrenches.

18. Disconnect the Tach Cable from the Motor Control Board.

19. With the help of another person, invert the Treadle Assembly.

- Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.
- The Treadle will fall abruptly if not supported. Keep hands away from the inside of the Treadles to avoid possible serious injury.
- The Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the edges of the Walking Belts.

20. Remove the 2 indicated bolts from the Virtual Pivot using two 13 mm (1/2") wrenches.

Note: When removing the Virtual Pivot, take note of the orientation. It must be replaced with the same orientation.
21. Install the IGUS ("hat" shaped) bushings into the pivot arms.

22. Install the metal spacers/washers into the bushings.

23. Add the washers to both sides of the Center Block as the bolt is installed. Tighten only until the nut has bottomed out on the metal spacers/washers.

**Note:** Do not overtighten. Excessive tightening will cause the metal spacer to crack.

24. Remaining assembly is the reverse procedure.

25. Installation is the reverse procedure.

26. Final Inspection

Inspect your machine to ensure that all hardware is tight and components are properly assembled.

⚠️ Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner's Manual.
Replacing the Hydraulic Cylinder (shock) on the TC20 fitness machine

Skill Level: I

Replacement Procedure

NOTICE: This document provides instructions for the replacement of the Hydraulic Cylinder on the Bowflex® TC20 fitness machine. If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

Important Safety Instructions - Before servicing or using this equipment, obey the following warnings:

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

- Read and understand the Part Replacement Procedure before working on the machine. Failure to obey the instructions and safety warnings could cause injury to the service technician or bystanders.
- Keep bystanders and children away from the product being serviced at all times.
- Make sure that the repair is done in an appropriate work space away from foot traffic and exposure to bystanders.
- Disconnect all power and allow to sit for 5 minutes before you service this machine.
- Some components of the equipment can be heavy or awkward. Enlist the service of a second person when you do maintenance steps involving these components. Do not try to do heavy or awkward steps on your own.
- If replacement parts are necessary, use only genuine Nautilus replacement parts and hardware. Failure to use genuine replacement parts can cause a risk to users, keep the machine from operating correctly and will void the warranty.
- Be sure that all warning stickers and instructional placards applied to the product stay present and in good condition when doing maintenance or replacing components. If necessary request replacement warning stickers or placards from Nautilus customer service.
- Do not try to change the design or functionality of the machine being serviced as this can adversely effect user safety.
- Do not use the machine until all shrouds, instructions, warning labels and correct functionality have been verified and tested for correct performance.
- This product contains magnets. Magnetic fields can interfere with the normal use of certain medical devices at a close range. Users may come into proximity of the magnets in the assembly, maintenance, and/or use of the product. Given the obvious importance of these devices, such as a pacemaker, it is important that you consult with your medical provider in connection with the use of this equipment. Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

Tools Required (not included)

5mm hex wrench
To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

1. Remove the lower Cylinder bolt using a 5 mm hex wrench.

2. Disconnect the Cylinder from the Treadle, and lower the Treadle gently.
   - The Treadle will fall abruptly if not supported. Keep hands away from the inside of the Treadles to avoid possible serious injury.

3. Remove the upper Cylinder bolt using a 5 mm hex key.

4. Installation is the reverse of this procedure

   **Note:** The white arrow on the Cylinders must be up and to the inside of the machine. Be sure to attach the cylinder to the Treadle before the Upright.

5. Final Inspection
   Inspect your machine to ensure that all hardware is tight and components are properly assembled.
   - Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
Replacing the Lower and Upper I/O Cables on
the TC20 fitness machine

NOTICE: This document provides instructions for the replacement of the Lower and Upper Input/Output (I/O) Cables on the Bowflex® TC20 fitness machine.

If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

Tools Required (not included)

5mm hex wrench

#2 Phillips screwdriver
1. Using a #2 Phillips Screwdriver, remove the 2 indicated screws from the Rear Cover.

2. Remove the Rear Cover.

3. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.

4. Unplug the lower Input/Output (I/O) Cable from the Motor Control Board.

   **Note:** The Motor Control Board is located under the Right Treadle.

5. Plug in the new lower I/O Cable to the Motor Control Board.

6. Using a piece of wire or string, connect the loose ends of the new lower I/O Cable and the old lower I/O Cable. The old cable will pull the new cable into place when removed.

---

**DANGER**

To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.
8. Disconnect the Cylinders from the Uprights, and lower the Cylinders and Treadles gently.

⚠️ The Treadle will fall abruptly if not supported. Keep hands away from the inside of the Treadles to avoid possible serious injury.

9. Using a 5 mm hex wrench, remove the five bolts in the indicated areas on the left side of the Console/Handlebar/Upright Assembly. Repeat on the right side of the Console/Handlebar/Upright Assembly.

10. Remove the Console/Handlebar/Upright Assembly from the Base Assembly and gently lower it to the floor. THIS STEP REQUIRES TWO PEOPLE.

⚠️ Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.
11. The connection of the lower and upper I/O Cable is now exposed. Disconnect the cables and gently pull the lower I/O Cable out while pulling the new lower I/O Cable in place. 
**Note:** Do not crimp the cables.

12. Remove the indicated Phillips head screw and the Console Access Panel from the Console Assembly.

13. Disconnect the upper I/O Cable from the Console.

14. Plug in the new upper I/O Cable to the Console.

15. Using a piece of wire or string, attach the loose ends of the new upper I/O Cable and the old upper I/O Cable. The old cable will pull the new cable into place when removed.

16. Gently pull the old upper I/O Cable from the bottom of the Upright toward the lower I/O Cable connection. Be sure not to crimp the new upper I/O Cable as it is routed. 
**Note:** Do not crimp the cables.

17. Gently pull the old lower I/O Cable from the front of the Base Assembly toward the upper I/O Cable. Be sure not to crimp the new lower I/O Cable as it is routed. 
**Note:** Do not crimp the cables.

18. Connect the new lower and upper I/O Cables. 
**Note:** Do not crimp the cables.

19. Installation is the reverse of this procedure.

20. Final Inspection
Inspect your machine to ensure that all hardware is tight and components are properly assembled.

**Warning:** Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
Replace the Treadle Assembly on a TC20 fitness machine  
Version 1 with a Treadle Assembly - Version 2

**NOTICE:** This document provides instructions for the replacement of the Treadle Assembly on a Bowflex® TC20 fitness machine Version 1 with the Treadle Assembly - Version 2. Some of the parts removed during the procedure will be used on the final assembly. Be aware that some of the Hardware included in the Replacement Treadle Assembly Kit will not be used.

If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

**SECTION A:** Remove Parts from Current Machine Assembly

Be sure to place all parts and hardware in a secure location away from build area. Do not dispose of any parts until the assembly of the new machine is complete. Unused parts may be discarded or returned to Nautilus.

1. Remove the Power Cord from the Treadle Assembly

   **DANGER** Disconnect all power and allow to sit for 5 minutes before you service this machine.

   **Note:** Place the Power Cord in a secure location so it can be re-attached on the final assembly.

2. Remove the Rear Cover from the Treadle Assembly

   **Note:** Place the Rear Cover in a secure location so it can be re-attached on the final assembly.
3. Remove the Transport Handle from the Treadle Assembly

**Note:** Place the Transport Handle and Hardware in a secure location so they can be re-attached on the final assembly.
4. Remove the Cylinders from the Treadle Assembly and the Uprights

⚠️ The Treadles do not have a locking mechanism and can move freely. Take care not to allow harm or injury to occur when lifting the Treadles.

**Note:** Place the Cylinders in a secure location so they can be re-attached on the final assembly.
5. Carefully remove the Console/Handlebar/Upright Assembly from the Base Assembly.

⚠️ Some components of the equipment can be heavy or awkward. Enlist the service of a second person when you do maintenance steps involving these components. Do not try to do heavy or awkward steps on your own.

**Note:** Do not crimp or pull the Cables.

6. Disconnect the Input/Output (I/O) Cables.

**Note:** Do not crimp the Cables.
7. Remove the Console/Handlebar Assembly from the Uprights.

**Note:** Place the Console/Handlebar Assembly and Junction Covers in a secure location so they can be re-attached on the final assembly.
8. Remove the Pivot Covers and Spacers from the Treadle Assembly

**Note:** Place the Pivot Covers in a secure location so they can be re-attached on the final assembly. Be sure to note the orientation of the Spacers and Hardware for replacement purposes.
9. Remove the Side Covers from the Treadle Assembly

**Note:** Place the Side Covers in a secure location so they can be re-attached on the final assembly. Be sure to note the orientation of the Hardware for replacement purposes.

**SECTION B:** Begin the New Machine Assembly

10. Using the Base Assembly supplied with the replacement kit, attach the Transport Handle to the Base Assembly.

**Note:** Transport Handle and Hardware were removed from previous assembly and not included in Replacement Kit (*).
11. Cut open the end of Box 2 and move the new Treadle Assembly beside the Base Assembly.

⚠️ Some components of the machine can be heavy or awkward. Use a second person when doing the assembly steps involving these parts. Do not do steps that involve heavy lifting or awkward movements on your own.

Note: Do not cut the Shipping Zip-Tie until instructed.
12. Attach the Treadle Assembly to the Base Assembly

Some components of the machine can be heavy or awkward. Use a second person when doing the assembly steps involving these parts.

Danger: Do not do steps that involve heavy lifting or awkward movements on your own.

Note: Do not crimp the Lower I/O Cable. Untie the Pull Cable from the rear of the Base Assembly and place it outside of the Base Assembly. Do not cut or allow it to fall into the Base Assembly.
13. Attach the Side Covers to the Treadle Assembly

**Note:** Be sure to use indicated Hardware that was supplied in the Replacement Kit. Side Covers were removed from previous assembly and not included in Replacement Kit (*).
14. Attach the Pivot Covers and Spacers to the Treadle Assembly

**Note:** Be sure to use indicated Hardware that was supplied in the Replacement Kit. Pivot Covers were removed from previous assembly and not included in Replacement Kit (*).
15. Insert the Lower I/O Cable into the Base Assembly and then Route to Front.

**Note:** Be sure to route the cable into the side opening of the Base Assembly. Do not crimp the Lower I/O Cable.

* Treadles removed for clarity.
16. Attach the Junction Covers and Uprights to the Console/Handlebar Assembly

In order to avoid possible serious injury, when inserting the tube ends into the Console/Handlebar Assembly be careful to avoid fingers or hands being caught or pinched.

**Note:** Do not crimp the Console I/O Cable. Be sure to use indicated Hardware that was supplied in the Replacement Kit. The Junction Covers and Console/Handlebar Assembly were removed from previous assembly and not included in Replacement Kit (*).
17. Connect the I/O Cable to the Console I/O Cable

**Note:** Do not crimp the I/O Cable.

18. Attach the Console/Handlebar/Upright Assembly to the Base Assembly

⚠️ In order to avoid possible serious injury, when inserting the tube ends into the Base Assembly be careful to avoid fingers or hands being caught or pinched. Be sure the excess length of the I/O Cable goes into the Upright and does not get crimped.

**Note:** Do not crimp the I/O Cables. This step may require two people. Do not fully tighten until all hardware has been installed.
19. Attach Cylinders to Treadles and then Uprights

⚠️ The Treadles do not have a locking mechanism and can move freely. Take care not to allow harm or injury to occur when lifting the Treadles.

Note: The settings dial on the cylinders must be up, with the white arrow to the inside of the machine. Attach to Treadles before the Uprights. Be sure to use indicated Hardware that was supplied in the Replacement Kit. Cylinders were removed from previous assembly and not included in Replacement Kit (*). Once attached, cut the Shipping Zip-Tie at the front of the Treadles.
20. Attach the Motor Cover to the Base Assembly

**Note:** Be sure the safety tabs on the Motor Cover snap onto the Base Assembly. Be sure to use the Motor Cover that was supplied with the Replacement Kit.
21. Secure the Motor Cover to the Base Assembly  
**Note:** Be sure to use indicated Hardware that was supplied in the Replacement Kit.

22. Attach the Rear Cover to the Treadle Assembly  
**Note:** Be sure the safety tabs on the upper-inside of the Rear Cover snap onto the Base Assembly. Be sure to use indicated Hardware that was supplied in the Replacement Kit. The Rear Cover was removed from previous assembly and not included in Replacement Kit (*).
23. Connect Power Cord to Treadle Assembly

**Note:** The TC20 TreadClimber® fitness machine is designed to plug directly into a properly wired and grounded three prong 120V outlet. If you connect the machine to an outlet with GFI (ground fault interrupt) or AFI (arc fault interrupt), machine operation can cause the circuit to trip. The Power Cord was removed from previous assembly and not included in Replacement Kit (*).

24. Final Inspection

Inspect your machine to ensure that all hardware is tight and components are properly assembled.

⚠️ Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
