Important Safety Instructions

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

Before servicing or using this equipment, obey the following warnings:

Read and understand the Service Manual before working on the machine. Failure to obey the instructions and safety warnings could cause injury to the service technician or bystanders.

**DANGER** To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and/or the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

- Keep bystanders and children away from the product being serviced at all times.
- Make sure that the repair is done in an appropriate work space away from foot traffic and exposure to bystanders.
- Some components of the equipment can be heavy or awkward. Enlist the service of a second person when you do maintenance steps involving these components. Do not try to do heavy or awkward steps on your own.
- Use only replacement parts and hardware that are supplied or approved by Nautilus. Failure to use Nautilus-approved replacement parts can adversely affect the safety and functionality of the equipment creating a risk to users and will void the warranty.
- Be sure that all warning stickers and instructional placards applied to the product stay present and in good condition when doing maintenance or replacing components. If necessary, request replacement warning stickers or placards from Nautilus customer service.
- Do not try to change the design or functionality of the machine being serviced as this can adversely affect user safety and will void the warranty.
- Do not put the machine back in service until all shrouds, instructions, warning labels and correct functionality have been verified and tested for correct performance.
- This product contains magnets. Magnetic fields can interfere with the normal use of certain medical devices at a close range. Users may come into proximity of the magnets in the assembly, maintenance, and/or use of the product. Given the obvious importance of these devices, such as a pacemaker, it is important that you consult with your medical provider in connection with the use of this equipment. Please consult the “Safety Warning Labels and Serial Number” section to determine the location of the magnets on this product.
SAFETY WARNING LABELS AND SERIAL NUMBER

**CAUTION**
Risk of Injury to Persons - To Avoid injury, use extreme caution when stepping onto or off of a moving belt. Read instruction manual before using.

**WARNING!**
- Prior to use, read and understand the Owner’s Manual, including all Warnings.
- Inspect product before use. Do not use if any parts are in need of repair.
- Keep children and pets away from this machine at all times.
- Not intended for use by anyone under 14 years of age.
- This machine is for home use only.
- Use caution when you use this equipment or serious injury can occur.
- To prevent injury, stand on the Foot Platforms before you start the machine.
- The maximum user weight for this machine is 136kg (300 lb).
- Replace any “Caution” “Warning” or “Danger” label that is illegible, damaged, or removed.
- The heart rate displayed on the console is an approximation and should be used for reference only.
- When this machine is not in operation, remove the Safety Key and keep out of the reach of children.

**WARNING!**
- Keep hands and feet away.
- Moving parts can crush and cut.
- Keep guards in place.
- Lock out power before servicing.

* under Rear Step

* under Motor Cover

* on inside of Treadles

Unplug power cord before you move the machine.
Grounding Instructions

This product must be electrically grounded. If a malfunction occurs, correct grounding decreases the risk of electric shock. The power cord is equipped with an equipment-grounding conductor, and must be connected to an outlet that is properly installed and grounded.

**DANGER** The electrical wiring must comply with all applicable local and provincial standards and requirements. Incorrect connection of the equipment-grounding conductor can result in a risk of electric shock. Consult a licensed electrician if you are not sure that the machine is correctly grounded. Do not change the plug on the machine – if it does not fit the outlet, have a correct outlet installed by a licensed electrician.

If you connect the machine to an outlet with GFI (ground fault interrupt) or AFCI (arc fault circuit interrupt), machine operation can cause the circuit to trip.

If an extension cord or surge protector is used with this machine, make sure that it is a heavy duty model rated at 15A operation, and accepts an equipment-grounding conductor. Do not connect other appliances or devices to the extension cord or surge protector in combination with this machine.

This machine is for use on a nominal 120-V circuit, and has a grounding plug that looks like the plug illustrated below. Make sure that the product is connected to an outlet having the same configuration as the plug. No adapter should be used with this product.

---

Emergency Stop Procedure (Safety Key Port)

The TreadClimber® machine is equipped with a Safety Key that can prevent serious injury, unsupervised operation, as well as prevent children from playing with and/or being injured on the machine. If the Safety Key is removed or not correctly inserted into the Safety Key Port, the belts will not operate.

**Always attach the Safety Key Clip to your clothing during your workout.**

When you use the machine, only remove the Safety Key in an emergency. When the key is removed while the machine is in operation, it will stop quickly, which could cause the loss of balance and possible injury.

For safe storage of the machine and to prevent unsupervised operation of the machine always remove the Safety Key and disconnect the power cord from the wall outlet and machine AC input. Place the power cord in a secure location.

The Console will display “INSERT SAFETY KEY” when the Safety Key is not attached. The TreadClimber® machine will end a workout program when the Safety Key is removed.
**SPECIFICATIONS**

**Maximum User Weight:** 300 lbs (136 kgs)

**Power Requirements:**
- Operational Voltage: 120VAC 60Hz
- Operating Current: 6.9A max

**Regulatory Approvals:**
- cULus mark. Evaluated per UL1647 Fifth Edition and CAN/CSA-C22.2. No. 68-09

**Maximum Inclined Treadle Height:** 17 inches (43.2 cm)

**Assembled Weight:** approx. 202 lbs (91.6 kg)

⚠️ This product, its packaging, and components contain chemicals known to the State of California to cause cancer, birth defects, or reproductive harm. This Notice is provided in accordance with California’s Proposition 65. If you would like additional information, please refer to our web site at www.nautilus.com/prop65.
Moving Your Machine

The TreadClimber® fitness machine weighs approximately 202 lbs (91.6 kg) when fully assembled and requires caution when being moved. Use the Transport Handle found under the front of the machine to move it. To get access to the Transport Handle, turn the Levelers until you have sufficient clearance between the machine and floor.

Your machine can be rolled on the transport wheels to a new location. Lower your machine slowly into its new location without injury to your head or fingers.

⚠️ Do not use the uprights, handlebars, or the Console to lift or move the machine. Injury to you or damage to the machine can occur.

The machine may be moved by one or more persons depending on their physical abilities and capacities. Make sure that you and others are all physically fit and able to move the machine safely.

Place the machine on a clean, hard, level surface, free from unwanted material or other objects that may hamper your ability to move freely. A rubber mat should be used below the machine to prevent the release of static electricity and protect your flooring.

For safe storage of the machine and to prevent unsupervised operation of the machine always remove the Safety Key and disconnect the power cord from the wall outlet and the AC input. Place the power cord in a secure location.

Leveling Your Machine

Levelers are found on the front of the TreadClimber® machine. Make sure the TreadClimber® machine is level and stable before you exercise. To adjust:

1. Loosen the upper locking nut.
2. Turn the leveler to adjust the height.
3. Tighten the upper locking nut to lock the leveler.

⚠️ Do not adjust the levelers to such a height that they detach or unscrew from the machine. Injury to you or damage to the machine can occur.
MAINTENANCE

Read all maintenance instructions fully before you start any repair work. In some conditions, an assistant is required to do the necessary tasks.

⚠️ Equipment must be regularly examined for damage and repairs. The owner is responsible to make sure that regular maintenance is done. Worn or damaged components must be repaired or replaced immediately. Only manufacturer supplied components can be used to maintain and repair the equipment.

⚠️ DANGER To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and/or the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

Daily: Before each use, inspect for loose, broken, damaged, or worn parts. Do not use the machine if any of these conditions exist. After each workout, use a damp cloth to wipe your machine and Console free of moisture.

Note: Avoid excessive moisture on the Console.

Weekly: Check for smooth roller operation. Clean the machine to remove dust, dirt, or grime. Clean the top of the belt with a slightly damp, soapy cloth and wipe carefully and thoroughly with a dry cloth. Do not let any liquid get below the belts or into the Base Frame.

Monthly: Make sure all bolts and screws are tight. Tighten if necessary.

NOTICE: Do not clean with a petroleum based solvent or an automotive cleaner. Be sure to keep the Console free of moisture.

Walking Belt and Deck Lubrication
The TreadClimber® machine is equipped with a low maintenance deck and belt system. Belt friction can affect the function and life of the machine. Your TreadClimber® fitness machine came with a starter supply of lubrication for the belts.

Lubrication Schedule

<table>
<thead>
<tr>
<th>User Level</th>
<th>Total Workout Hours per Week</th>
<th>When to Lubricate</th>
</tr>
</thead>
<tbody>
<tr>
<td>Light</td>
<td>less than 3 hours</td>
<td>every 3 months</td>
</tr>
<tr>
<td>Moderate</td>
<td>3 to 5 hours</td>
<td>every 2 months</td>
</tr>
<tr>
<td>Heavy</td>
<td>5 or more hours</td>
<td>every month</td>
</tr>
</tbody>
</table>

We recommend that you use one of the following:
- Lube-N-Walk® Treadmill Lubrication Kit (available from www.bowflex.com or your local specialty fitness dealer)
- 100% pure silicone, available at most hardware and auto parts stores.

As you use your fitness machine, the Console will show “NOTE LUBRICATE BELT” followed by “REVIEW USER MANUAL” at set times. This is only a reminder and should be added to your inspection schedule. Only apply lubricant as necessary. Push the ENTER button to accept the reminder.

For the best results lubricate the Treadles periodically with a silicone lubricant, using the following instructions:
1. Unplug the machine fully from the wall outlet, and remove the power cord from the machine. Place the power cord in a secure location.

2. Carefully lift each belt and apply silicone lubricant in the center of the Treadle deck along the entire reachable length of the deck. Apply 0.5 to 1.5 oz. of the lubricant on the deck underneath each belt.

   **NOTICE:** Always use a 100% pure silicone lubricant. Do not use a degreaser like WD-40® spray lubricant or a petroleum based product as this could seriously impact performance.

   **Note:** The Walking Belts may need to be loosened to allow for access during lubrication. Consult the “Adjusting the Walking Belts” procedure if necessary.

3. Connect the power cord back into the machine and then into the wall outlet.

4. Stay to one side of your machine.

5. Switch on your machine and start the belts at the slowest speed. Let the belts operate for approximately 15 seconds.

6. Switch off your machine.

7. Take care to clean up any excess lubricant from the Treadles. We also recommend a periodic inspection of the Treadle surfaces below the belts. If the decks appear worn, contact a Customer Service Representative.

   **Warning:** To decrease the possibility of slipping, be sure the Treadle area is free from grease or oil. Clean off any excess oil from the machine surfaces.
Walking Belt Alignment
The walking belts need to be adjusted if they are out of center enough to cause a rubbing or scraping sound. Adjustments can be made at the Front Roller of each Treadle.

Adjusting the Walking Belts – While operating the machine, notice where the belts run on each Treadle. The Walking Belt Adjustment Bolts are on the front end of each Roller. If the belt is tracking too far to the right, use a properly sized Hex Key to turn the right adjustment bolt clockwise on that belt in full turn increments. If the belt tracks too far to the left, do the same thing on the left adjustment bolt.

Note: Do not turn the bolts counterclockwise when you adjust the belt alignment.

Belt Tension Check – Check the belt tension only when the machine is unplugged. From the belt’s midpoint, a correctly tensioned belt should only have an inch of give. To check, pull the belt upward at its midpoint and measure the distance to the deck. If the distance is more than an inch, the belt is loose. To tighten, turn both Walking Belt Adjustment Bolts clockwise one-half a turn and check tension again. Repeat this step if necessary.

Note: Bolts are turned counterclockwise equally to decrease belt tension.
Maintenance Parts (Treadle Assembly)
Electrostatic Shock

It is not uncommon for static to build up on any machine with a moving belt. The machine is designed to properly minimize static build up. However if it happens, avoid wearing loose or baggy clothes. Also put hair up in a pony tail, if applicable.

How often is the machine used and when was the machine last lubricated? Refer to the Owner's Manual for lubrication maintenance.

While the machine is unplugged, check the plastic covers to ensure that they do not rub the belts.

Is the machine being used with an extension cord? The machine must plug directly into a properly grounded outlet. If an extension cord needs to be used, it must be a 3 prong, 14 gauge extension cord.

The machine must be plugged into a properly wired 3-prong power outlet. If unsure about the wiring, purchase a receptacle tester to test the outlet. These can be found online with a search for "receptacle tester", or visit a local hardware store.

If problem persists purchase a treadmill anti-static wrist band / strap.
No Power, Display Never Turns On

BEGIN HERE

Unplug the power cord from both ends. Inspect the entire cord for any damage or crimps. Plug the power cord back in securely at both ends.

Does the power cord need to be replaced?

NO

Is the power cord plugged directly in to a 3 prong outlet?

NO

Plug the power cord directly in to a properly wired 3-prong outlet.

YES

Get a replacement power cord. Dispose of the damaged power cord.

Unplug the power cord from the wall outlet and the machine and wait 5 minutes before continuing.

Check the AC Power Wiring. The wires plug in to the right side of the MCB, and the other end connects to the back side of the on/off switch area.

While waiting the 5 minutes, move to the right side of the machine. The wires you will be checking are connected to the right side of the MCB.

Does the on / off switch glow, when you flip it on? It is located next to where the power cord plugs in.

NO

Unplug the power cord directly in to a properly wired 3-prong outlet.

YES

Check the AC Power Wiring. The wires plug in to the right side of the MCB, and the other end connects to the back side of the on/off switch area.

Does the wall power outlet work properly?

YES

Replace the power cord, and AC Inlet Power Wiring.

NO

Use a different wall power outlet.

Does the power cord need to be replaced?

NO

If a different wall power outlet does not work, contact customer care for advanced troubleshooting assistance.

YES

Get a replacement power cord. Dispose of the damaged power cord.

Replace the I/O cables.

Does the console turn on?

NO

Replace the upper electronics.

YES

Replace the I/O cables.

Does the console turn on?

NO

Replace the upper electronics.

YES

Issue resolved.
Does the issue persist?

Lower the setting by rotating the adjustable dial towards minimum.

- The shocks feel like they recoil too fast. They are banging against the top.
- The shocks are clunking.
- The shocks are bottoming out. They don’t return high enough between steps.
- The shocks do not drop down enough when in use.
- One or both of the shocks do not return all the way up to the top.
- The shocks are leaking.

Reduce travel to minimum. Allow the shocks to warm up by continuing to work out. It could take up to 5 minutes.

- Does the shocks bang against the top when they recoil?

Increase the setting by rotating the adjustable dial towards maximum.

- It’s normal for one or both of the shocks to not go all the way up to the top. It will not affect normal usage of the machine.

Note: The dynamics of the system is a function of your weight, walking speed, and shock settings.

- Does the issue persist?

Decrease speed. The shocks will not go up and down very much if you are walking at a higher speed.

- Does the issue persist?

If the issue persists through the entire workout, replace the shocks with a set of standard travel shocks.

If the issue persists through the entire workout, replace the shocks with a set of extra travel shocks.

Increase speed. The shocks will bottom out if you are walking at a slower speed.

- Does the issue persist?

Note: The dynamics of the system is a function of your weight, walking speed, and shock settings.

- Does the issue persist?

If the issue persists through the entire workout, replace the shocks with a set of extra travel shocks.

- Does the issue persist?
Look under the treadles for any debris or obstructions.

If there was debris or obstructions, safely remove them.

Operate the machine again. Do you still hear the noise?

Issue resolved

NO

YES

GO TO TROUBLESHOOTING: NOISE ISSUES MAIN
About Noises:
If you are uncertain about where the noise is coming from, start with Troubleshooting: “Front of Machine”.
If the noise only happens when walking on the machine, have a 2nd user walk on the machine, while you safely locate the source of the noise.

Does the noise come from the front, middle, or back of the machine?

Is there any debris or obstructions under the treadles?

NOTE: This step is required for all noise issues.

Go to Troubleshooting: Front of Machine
Go to Troubleshooting: Middle of Machine
Go to Troubleshooting: Back of Machine
BEGIN HERE

Confirm the sound is coming from the front. Run the belts and listen for the sound, near the front roller.

Is the sound coming from the front of the machine?

YES

Is the front roller damaged? Is the noise coming from the front roller? Is the noise present without a user?

NO

Try to isolate where the noise is coming from.

YES

Replace the Front Roller

NO

Go to Troubleshooting: Hydraulic Shock

YES

Is the noise coming from the shocks?

NO

BELT ALIGNMENT STEPS

YES

Are the belts rubbing?

NO

Go to Troubleshooting: Middle of Machine
While belts are in operation check to see if noise is coming from the walking belts contacting part of the machine. Note: it is normal for belts to ride partially on black plastic belt guide at rear, and metal belt guide under machine, as long as contact is not so forceful that noise is produced.

Is the noise coming from the machine?

Check the friction block. Is it loose, or damaged?

Replace the friction block.
Begin Here

Turn belts on at 1.5 mph, with no one on the machine. Does the rear roller make grinding or clicking noises when rotated?

Yes → Replace the rear roller.

No →

Check the IGUS / Virtual Pivot, ensure hardware is tight. Are the bushings worn or damaged?

Yes → Replace the IGUS / Virtual Pivot.

No →

Is the drive belt worn or damaged?

Yes → Replace the drive belt.

No →

Make sure the motor is mounted securely to the frame. Does motor or tach wheel show visible signs of damage?

Yes → Replace the motor.

No →

Remove the drive belt. Rotate motor manually, is noise evident during rotation?

Yes → Go to Troubleshooting: Middle of Machine.

No →

** If front, middle, and back of machine have been checked, and noise persists, contact customer care for advanced troubleshooting assistance.
If the I/O Cables have been replaced, and the issue persists, contact customer care for advanced troubleshooting assistance.

Is the display blank?

- **YES**
  - Go to Troubleshooting: No Power

- **NO**
  - Is there an Error Code on the display?
    - **YES**
      - Go to Troubleshooting: Error Codes
    - **NO**
      - Check the I/O connections at MCB, top of right upright, and back of console.

Do the buttons respond now?

- **YES**
  - Issue resolved.

- **NO**
  - Replace the I/O Cables
Belt Wear / Damage

Assess Wear and Damage

What type of wear or damage are belts exhibiting?

ABNORMAL

Light Fraying, short fluffy threads

1. Trim any ends of the threads.
2. Refer to the Walking Belt Alignment section of the Owner’s Manual.
3. When in use, note how the feet land on the walking belt. If the feet push out, belt alignment should be inspected more often.

NORMAL

Long, string threads; rips/tears in Belt(s).

Walking belt(s) need to be replaced.

1. Obtain photo(s) of damage.
2. Replace Belts.
3. Follow the Walking Belt Alignment instructions located in the Owner’s Manual after replacing the Belts or treadle assembly before using the product.
4. Some walking styles may push the Belts out, which may cause some light belt fraying, but this does not typically impact the performance of the Belts.

Issue resolved
Treadles Do Not Go Up and Down Smoothly

BEGIN HERE

Check the friction block. Is it loose, damaged; are the screws unthreading?

YES → Replace the friction block

NO →

Check the IGUS for signs of wear. Check to see if the plastic is coming apart, or if there are any plastic shavings around the IGUS. Tighten the hardware if it has come loose.

Did tightening the hardware resolve the issue?

YES → Issue resolved

NO →

Go to Troubleshooting: Hydraulic Shock

Does the IGUS / Virtual Pivot need to be replaced?

NO →

YES → Replace the IGUS / Virtual Pivot assembly.
Please be descriptive of the issue. Answer all questions listed below:

- Does the power shut off completely?
- Does the display go blank?
- If the display is not blank, what exactly is on the display?
- Is the display frozen?
- Do the buttons respond?
- Is the power switch still glowing?
- How long into a workout does the issue happen?
- What speed are they using when it happens?
- User weight?
- Have they ever lubed the belts?
- When was the last time they lubed the belts?
- Have they adjusted anything recently?
Contact Plate Heart Rate Issues

BEGIN HERE

- Trying to use the contact or telemetric heart rate?
  - Yes: Go to Troubleshooting: Telemetric Heart Rate Issues
  - No: Is the heart rate icon on the console display flashing at all?

- If unsure, use the machine while firmly holding the contact plates for 10 seconds.

- Is the heart rate icon on the console display flashing at all?
  - Yes: Be sure hands are centered on the heart rate sensors with equal pressure, and move as little as possible without touching the metal frame.
  - No: Check the heart rate wiring connections that run from the handlebar into the console assembly. Unplug and plug the connections back onto the Console Bezel Assembly.

- The initially reported heart rate may spike when first touching the contact plates. The rate will normalize after a couple of minutes. Try to move hands as little as possible.

- Dry or heavily calloused hands may need a heart rate cream to make better contact.

- Does the issue persist?
  - No: Issue resolved.
  - Yes: Replace the Handlebar Assembly.
Telemetric Heart Rate Issues

BEGIN HERE

Do not use the contact heart rate grips while using the telemetric chest strap, as they can confuse the signal.

Be sure the chest strap is "POLAR" compatible and uncoded. Make sure that the strap is against bare skin and facing up (arrow on back side should point up). Make sure the contact areas are damp.

Move the machine away from sources of potential interference, such as a television, microwave, cordless phone, etc.

Locate the telemetric heart rate receiver on the underside of the Console Main Assembly (1"x3" blue printed circuit board). Make sure the wire is securely connected.

Contact customer care for advanced troubleshooting assistance.
**ERROR CODE TROUBLESHOOTING**

- If the below steps do not resolve the issue, contact customer care for Advanced Troubleshooting assistance.
- In the event that Advanced Troubleshooting assistance is required, record all errors from the log using the procedure at the bottom of the page.
- Include all data from the error log. Also record the total run hours from the Machine Settings mode. Include this information with the Advanced Troubleshooting request.

Error Code Troubleshooting only applies when a machine stops and displays code on the screen. DO NOT troubleshoot codes in the error log, as they can be old, and do not necessarily indicate any problems with the machine.

Accessing the error log (for Advanced Troubleshooting use only)

1. Hold down the STOP/PAUSE button and Right button together for 3 seconds while in the Power-Up Mode to access the Machine Settings Mode.

   **Note:** Push STOP/PAUSE to exit the Machine Settings Mode and return to the Power-Up Mode screen.

2. The Console display shows the SET DATE prompt with the current date setting. The month value will be the currently active value (flashing). Push the Increase/Decrease buttons to adjust the currently active value (flashing). Push the Left/Right buttons to change which segment is the currently active value (month / day / year).

3. Push the Right button until the next prompt is displayed.

4. The Console display shows the SET TIME prompt with the current time setting. The hour value will be the currently active value (flashing). Push the Increase/Decrease buttons to adjust the currently active value (flashing). Push the Left/Right buttons to change which segment is the currently active value (hour / minute / AM or PM).

5. Push the Right button until the next prompt is displayed.

6. The Console display shows the current Software Version.

7. Push the Right button to go to the next option.

8. The Console display shows the current MCB Version.

9. Push the Right button to go to the next option.

10. The Console display shows the VIEW ERROR MESSAGES prompt. Push the ENTER button to select this option. The Console display shows ERROR VERSION X. Push the Right arrow button to view each error code in sequence.
The Machine Settings Mode lets you adjust the date and time, review error messages, update key systems, and view the total run hours for the machine.

1. Hold down the STOP/PAUSE button and Right button together for 3 seconds while in the Power-Up Mode to access the Machine Settings Mode.

   **Note:** Push STOP/PAUSE to exit the Machine Settings Mode and return to the Power-Up Mode screen.

2. The Console display shows the SET DATE prompt with the current date setting. The month value will be the currently active value (flashing). Push the Increase/Decrease buttons to adjust the currently active value (flashing). Push the Left/Right buttons to change which segment is the currently active value (month / day / year).

3. Push the Right button until the next prompt is displayed.

4. The Console display shows the SET TIME prompt with the current time setting. The hour value will be the currently active value (flashing). Push the Increase/Decrease buttons to adjust the currently active value (flashing). Push the Left/Right buttons to change which segment is the currently active value (hour / minute / AM or PM).

5. Push the Right button until the next prompt is displayed.

6. The Console display shows the current Firmware Version.

7. Push the Right button to go to the next option.

8. The Console display shows the current MCB Version.

9. Push the Right button to go to the next option.

10. The Console display shows the VIEW ERROR MESSAGES prompt. Push the ENTER button to select this option. The Console display shows ERROR VERSION X. Push the Right arrow button to view the error codes.

11. Push STOP/PAUSE to exit the error log.

12. The Console displays the RUN HOURS for the machine.

13. Push the Right button.

14. The Console displays the CONSOLE RESET prompt. Console Reset erases the settings of the User Profiles and all Workouts.

   **Note:** If you want to reset the Console, push the ENTER button. Push the Increase/Decrease buttons to select the “CONSOLE RESET YES” option, and push ENTER. The Console will reset. Push STOP/PAUSE to return to the Power-Up Mode screen.

15. Push the Right button.

16. The Console displays the SOUND UPGRADE prompt.

   **Note:** If you have an update for the sounds, insert the USB Flash Drive with the update file into the Console and push the ENTER button. Push the Increase/Decrease buttons to select the “SOUND UPGRADE YES” option, and push ENTER. The Console will display “SAVING”, and then “REMOVE USB” when it is safe to remove the USB Flash Drive. The Console will exit the Machine Settings Mode and return to the Power-Up Mode screen.

17. Push the Right button.
18. The Console displays the BLE DISCONNECT prompt.

   **Note:** If you want to disconnect the Bluetooth® transmitter, push the ENTER button. Then push the Increase/Decrease buttons to select the “BLE DISCONNECT YES” option, and push ENTER. The Console will exit the Machine Settings Mode and return to the Power-Up Mode screen.

19. Push the Right button.

20. The Console displays the BLE FW UPGRADE prompt.

   **Note:** If you have an update for the Bluetooth® Low Energy (also called Bluetooth® Smart) system, insert the USB Flash Drive with the update file into the Console. Push the Increase/Decrease buttons to select the “BLE FW UPGRADE YES” option, and push ENTER. The Console will display “SAVING”, and then “REMOVE USB” when it is safe to remove the USB Flash Drive.

21. Push the Right button to exit the Machine Settings Mode and return to the Power-Up Mode screen.
Level I: Low - very little mechanical knowledge or exposure.
Level II: Intermediate - some experience with mechanical procedures
Level III: Advanced - knowledgeable about mechanical procedures

⚠️ **DANGER** To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and wait 5 minutes before cleaning, maintaining or repairing this machine. Place the power cord in a secure location.

⚠️ When disposing of old parts, obey the applicable local and provincial requirements.
Important Safety Instructions - Before servicing or using this equipment, obey the following warnings:

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

- Read and understand the Part Replacement Procedure before working on the machine. Failure to obey the instructions and safety warnings could cause injury to the service technician or bystanders.
- Keep bystanders, children and pets away from the product being serviced at all times.
- Make sure that the repair is done in an appropriate work space away from foot traffic and exposure to bystanders.
- Disconnect all power and allow to sit for 5 minutes before you service this machine.
- Some components of the equipment can be heavy or awkward. Enlist the service of a second person when you do maintenance steps involving these components. Do not try to do heavy or awkward steps on your own.
- If replacement parts are necessary, use only genuine Nautilus replacement parts and hardware. Failure to use genuine replacement parts can cause a risk to users, keep the machine from operating correctly and will void the warranty.
- Be sure that all warning stickers and instructional placards applied to the product stay present and in good condition when doing maintenance or replacing components. If necessary request replacement warning stickers or placards from Nautilus customer service.
- Do not try to change the design or functionality of the machine being serviced as this can adversely effect user safety and will void the warranty.
- Do not use the machine until all shrouds, instructions, warning labels and correct functionality have been verified and tested for correct performance.
- This product contains magnets. Magnetic fields can interfere with the normal use of certain medical devices at a close range. Users may come into proximity of the magnets in the assembly, maintenance, and/or use of the product. Given the obvious importance of these devices, such as a pacemaker, it is important that you consult with your medical provider in connection with the use of this equipment. Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

Tools Required (not included)

#2 Phillips screwdriver
To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

1. Unplug the power cord from the machine and wait 5 minutes.

2. Remove the 2 indicated screws from the Rear Cover using a #2 Phillips screwdriver.

3. Remove the Rear Cover.

4. Using a #2 Phillips screwdriver, remove the two indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.
5. On the Motor Control Board, disconnect the AC Power Wires by pulling straight out on the Connectors – do not pull on the wire itself.

**Note:** The Motor Control Board is located under the right Treadle.

6. Using a #2 Phillips screwdriver, detach the AC Grounding Wire from the Treadle Assembly.

7. With assistance, carefully set the machine on to the left side.

![Warning]

Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

8. Remove the 4 indicated screws from the A/C Inlet housing using a #2 Phillips screwdriver.

9. Remove the A/C Inlet, pulling the detached wires from the Control Board compartment.

10. From the new A/C Inlet, push the Grounding and AC Power Wires into the Control Board compartment.

11. Attach the AC Power Wires to the Control Board, and the AC Grounding Wire to the Base Assembly.

12. Attach the new A/C Inlet using a #2 Phillips screwdriver.

**Note:** Do not crimp any wires.

13. Attach the Motor Cover using the #2 Phillips screwdriver.

14. Attach the Rear Cover using the #2 Phillips screwdriver.
15. Final Inspection

Inspect your machine to ensure that all hardware is tight and components are properly assembled.

⚠️ Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
**Notice:** This document provides instructions for the replacement of the Console Bezel Assembly on the Bowflex® TreadClimber® TC200.

If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

**Tools Required (not included)**

- #2 Phillips screwdriver
To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

1. Unplug the power cord from the machine and wait 5 minutes.

2. Remove the four indicated Phillips head screws from under the Console Assembly.

3. Pivot the Console Bezel Assembly slightly forward to expose the Cables.

4. After noting their locations, disconnect all of the Cables from the Console Bezel Assembly.

**Note:** Do not crimp or damage any Cables.
5. Remove the old Console Bezel Assembly and replace with new Console Bezel Assembly.

6. Installation is the reverse procedure.

7. Final Inspection
Inspect your machine to ensure that all hardware is tight and components are properly assembled.

⚠️ Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner's Manual.
Replace the Console Main Body on the
Bowflex® TreadClimber® TC200

NOTICE: This document provides instructions for the replacement of the Console Main Body on the Bowflex® TreadClimber® TC200.

If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

Tools Required (not included)

#2 Phillips screwdriver

5mm hex wrench
To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

1. Unplug the power cord from the machine and wait 5 minutes.

2. Using a 5 mm hex wrench, remove the six screws in the indicated areas (three screws visible in image) that secure the Console/Handlebar Assembly.

3. Slightly remove the Console/Handlebar Assembly from the Right Upright and disconnect the Upper and Lower I/O Cables. When disconnected, fully remove the Console/Handlebar Assembly while not allowing the lower I/O Cable to fall into the Right Upright. Tie the I/O Cable off with some wire or string to be sure it does not fall into the Upright.

   ! This step may require two people.

   Note: Do not crimp the cables.

4. Place the Console/Handlebar Assembly face down onto something that will protect it from marking or damage, such as a blanket.

   Note: Images displayed may be different from current configuration.

5. Using a 5mm hex wrench, remove the four indicated screws that secure the Console Main Body.
6. Gradually slide the Console Main Body from the Handlebars. Be sure to not crimp any Cables as they come free from the Assembly. Disconnect the Cables where possible.

Note: Do not crimp the cables.

7. Remove the indicated Phillips head screws from the Console Assembly.

8. Pivot the Console Bezel Assembly and remove the cables that run through the Console Main Body.

Note: Do not crimp the cables. Be sure to note locations to assist with re-assembly.
9. Place the Console Bezel Assembly on the new Console Main Body, and route the Cables through it.

**Note:** Do not crimp the cables.

10. With the Cables routed, pivot and attach the Console Bezel Assembly to the new Console Main Body.

11. Installation is the reverse procedure. Do not crimp the Cables.

12. **Final Inspection**

Inspect your machine to ensure that all hardware is tight and components are properly assembled.

⚠️ **Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.**
Replace the Drive Belt on the Bowflex® TreadClimber® TC200

Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.
1. Unplug the power cord from the machine and wait 5 minutes.

2. Remove the 2 indicated screws from the Rear Cover using a #2 Phillips Screwdriver.

3. Remove the Rear Cover.

4. Using a #2 Phillips screwdriver, remove the two indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.

5. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the left Pivot Cover.

6. Remove the left Pivot Cover.
7. Using a #2 Phillips screwdriver, remove the indicated screw from the left Side Cover.

8. Tilt unit carefully onto the right side.

Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

9. Remove the 5 indicated screws using a #2 Phillips screwdriver from the left Side Cover. To assist with re-assembly, note that washers are used toward the front of the machine.

10. Remove the left Side Cover.
11. Turn the Drive Pulley clockwise while forcing the Drive Belt to the outside. Belt will come off of the Drive and Motor Pulley.

⚠️ Keep fingers out of any pinch opportunities when turning the Pulleys.

12. Wrap the new Drive Belt around the Motor Pulley. Start the Drive Belt on the Drive Pulley and roll it in a clockwise motion. Be sure the Belt does not come off of the Motor Roller.

⚠️ Keep fingers out of any pinch opportunities when turning the Pulleys.

13. Roll the Drive Pulley clockwise until the Drive Belt is fully installed. Continue to roll the Belt forward while adding side pressure with fingers to align as necessary.

14. Replace the Side Cover and secure with side cover screws.

15. With assistance, carefully set the machine upright.

⚠️ Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

16. Replace the Pivot Cover and screws.

17. Replace the Motor Cover and secure with screws.

18. Replace Rear Cover and secure with screws.

19. Final Inspection

Inspect your machine to ensure that all hardware is tight and components are properly assembled.

⚠️ Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
Replace the Front Roller on the Bowflex® TreadClimber® TC200

If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

Tools Required (not included)

#2 Phillips screwdriver

5mm wrench

NOTICE: This document provides instructions for the replacement of the Front Roller on the Bowflex® TreadClimber® TC200.

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

Important Safety Instructions - Before servicing or using this equipment, obey the following warnings:

- Read and understand the Part Replacement Procedure before working on the machine. Failure to obey the instructions and safety warnings could cause injury to the service technician or bystanders.
- Keep bystanders, children and pets away from the product being serviced at all times.
- Make sure that the repair is done in an appropriate work space away from foot traffic and exposure to bystanders.
- Disconnect all power and allow to sit for 5 minutes before you service this machine.
- Some components of the equipment can be heavy or awkward. Enlist the service of a second person when you do maintenance steps involving these components. Do not try to do heavy or awkward steps on your own.
- If replacement parts are necessary, use only genuine Nautilus replacement parts and hardware. Failure to use genuine replacement parts can cause a risk to users, keep the machine from operating correctly and will void the warranty.
- Be sure that all warning stickers and instructional placards applied to the product stay present and in good condition when doing maintenance or replacing components. If necessary request replacement warning stickers or placards from Nautilus customer service.
- Do not try to change the design or functionality of the machine being serviced as this can adversely effect user safety and will void the warranty.
- Do not use the machine until all shrouds, instructions, warning labels and correct functionality have been verified and tested for correct performance.
- This product contains magnets. Magnetic fields can interfere with the normal use of certain medical devices at a close range. Users may come into proximity of the magnets in the assembly, maintenance, and/or use of the product. Given the obvious importance of these devices, such as a pacemaker, it is important that you consult with your medical provider in connection with the use of this equipment. Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.
To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

1. Unplug the power cord from the machine and wait 5 minutes.

2. Using a #2 Phillips Screwdriver, remove the 2 indicated screws from the Rear Cover.

3. Remove the Rear Cover.

4. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the left Pivot Cover.

5. Remove the left Pivot Cover.

6. Using a #2 Phillips screwdriver, remove the indicated screw from the left Side Cover.
7. Tilt the machine carefully onto the right side.

⚠️ Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

8. Remove the 5 indicated screws using a #2 Phillips screwdriver from the left Side Cover. To assist with re-assembly, note that washers are used toward the front of the machine.

9. Slide the left Side Cover off of the machine.

10. Remove the Belt Tensioning Screws and Brackets using a 5 mm hex wrench.

**Note:** Be sure to record how many turns it takes to remove the screws to assist with reassembly. Also note the orientation of the Brackets. The larger Bracket is to the outside of the machine.

11. Remove the Front Roller by sliding it out of the belt.

12. Installation is the reverse procedure. Be sure to tension belts properly after reassembly following the procedures in the Owner’s manual.

**Note:** Be sure to tighten the Belt Tensioning Screws the number of turns previously recorded.
Walking Belt Adjustment
The walking belts need to be adjusted if they are out of center enough to cause a rubbing or scraping sound. Adjustments can be made at the Front Roller of each Treadle (Item A).

Belt Alignment Check – Stand adjacent to the unit and set the speed to 1.5 MPH. The alignment adjustment bolts are on the front end of each Roller. If the belt is tracking too far to the right, use a 5 mm Hex Key to turn the right adjustment bolt clockwise on that belt in full turn increments. If the belt tracks too far to the left, do the same thing on the left adjustment bolt. **Note:** Do not turn the bolts counterclockwise when you adjust the belt alignment.

Belt Tension Adjustment – Check the belt tension only when the machine is unplugged. From the belt's midpoint, a correctly tensioned belt should only have an inch of give. To check, pull the belt upward at it’s midpoint and measure the distance to the deck. If the distance is more than an inch, the belt is loose. To tighten, turn both bolts clockwise one-half a turn and check tension again. Repeat this step if necessary. Be sure not to over-tighten the belts. **Note:** Bolts are turned counterclockwise equally to decrease belt tension.

13. Final Inspection
Inspect your machine to ensure that all hardware is tight and components are properly assembled.

⚠️ **Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner's Manual.**
Replace the Hydraulic Shock on the Bowflex® TreadClimber® TC200

NOTICE: This document provides instructions for the replacement of the Hydraulic Shock on the Bowflex® TreadClimber® TC200.

If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

Important Safety Instructions - Before servicing or using this equipment, obey the following warnings:

• Read and understand the Part Replacement Procedure before working on the machine. Failure to obey the instructions and safety warnings could cause injury to the service technician or bystanders.
• Keep bystanders, children and pets away from the product being serviced at all times.
• Make sure that the repair is done in an appropriate work space away from foot traffic and exposure to bystanders.

Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

Tools Required (not included)

5mm hex wrench
1. Unplug the power cord from the machine and wait 5 minutes.

2. Using a 5mm hex wrench, remove the indicated screw from the Shock (or Cylinder).

3. Disconnect the Shock from the Treadle, and lower the Treadle gently.
   - The Treadle will fall abruptly if not supported. Keep hands away from the inside of the Treadles to avoid possible serious injury.

4. Remove the upper screw using a 5 mm hex wrench.

5. Using a 5mm hex wrench, attach the new shock to the Upright and then the Treadles.

   **Note:** The settings decal on the Shocks must be up, with the arrows facing to the rear of the machine.

6. Final Inspection
   Inspect your machine to ensure that all hardware is tight and components are properly assembled.

   **Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner's Manual.**
Replace the Input/Output (I/O) Cables on the Bowflex® TreadClimber® TC200

NOTICE: This document provides instructions for the replacement of the Input/Output (I/O) Cables on the Bowflex® TreadClimber® TC200.

If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

Important Safety Instructions - Before servicing or using this equipment, obey the following warnings:

Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

Tools Required (not included)

5mm hex wrench

#2 Phillips screwdriver

A short piece of wire or string
To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

1. Unplug the power cord from the machine and wait 5 minutes.

2. Using a #2 Phillips Screwdriver, remove the 2 indicated screws from the Rear Cover.

3. Remove the Rear Cover.

4. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.

5. Unplug the lower Input/Output (I/O) Cable from the Motor Control Board.

   **Note:** The Motor Control Board is located under the Right Treadle.

6. Plug in the new lower I/O Cable to the Motor Control Board.
7. Using a piece of wire or string, connect the loose ends of the new lower I/O Cable and the old lower I/O Cable. The old cable will pull the new cable into place when removed.

8. Using a 5 mm hex wrench, remove the six bolts in the indicated areas (three visible in image) that secure the Console/Handlebar Assembly.

9. Slightly remove the Console/Handlebar Assembly from the Right Upright and disconnect the Upper and Lower I/O Cables. When disconnected, fully remove the Console/Handlebar Assembly while not allowing the I/O Cable to fall into the Right Upright.

⚠️ This step may require two people.

10. Place the Console/Handlebar Assembly onto something that will protect it from marking or damage, such as a blanket.

11. Using a piece of wire or string, connect the loose ends of the new upper I/O Cable and the old upper I/O Cable. The old cable will pull the new cable into place when removed.
12. Using a 5mm hex wrench, remove the four indicated screws that secure the Main Console Assembly.

13. Gradually slide the Main Console Assembly from the Handlebars. Be sure to guide the new upper I/O Cable and not crimp any Cables as they come free from the Assembly.

**Note:** Do not crimp the cables.

14. Remove the four indicated Phillips head screws from the Console Assembly.
15. Slightly pivot the Console Bezel Assembly.

**Note:** Do not crimp the cables.

16. Disconnect the upper I/O Cable from the Console Board. Gently remove the cable by pulling it out as the new upper I/O Cable is routed into place.

**Note:** Do not crimp the cables.

17. Plug in the new upper I/O Cable to the Console Board.

**Note:** Do not crimp the cables.

18. Reattach the Console Bezel Assembly to the Console Assembly

**Note:** Do not crimp the cables.
19. Gently pull the old lower I/O Cable from the right Upright. Be sure not to crimp the new lower I/O Cable as it is routed into place.

**Note:** Do not crimp the cables.

20. Disconnect the old I/O Cable and discard.

21. Connect the new lower and upper I/O Cables and attach the Console Assembly.

**Note:** Do not crimp the cables.

22. Installation is the reverse of this procedure.

![Warning](image)

**In order to avoid possible serious injury, when inserting the tube ends into the Base Assembly be careful to avoid fingers or hands being caught or pinched.**

23. Final Inspection

Inspect your machine to ensure that all hardware is tight and components are properly assembled.

![Warning](image)

**Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.**
Notice: This document provides instructions for the replacement of the Motor on the Bowflex® TreadClimber® TC200.

If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

Important Safety Instructions - Before servicing or using this equipment, obey the following warnings:

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

• Read and understand the Part Replacement Procedure before working on the machine. Failure to obey the instructions and safety warnings could cause injury to the service technician or bystanders.
• Keep bystanders, children and pets away from the product being serviced at all times.
• Make sure that the repair is done in an appropriate work space away from foot traffic and exposure to bystanders.
• Disconnect all power and allow to sit for 5 minutes before you service this machine.
• Some components of the equipment can be heavy or awkward. Enlist the service of a second person when you do maintenance steps involving these components. Do not try to do heavy or awkward steps on your own.
• If replacement parts are necessary, use only genuine Nautilus replacement parts and hardware. Failure to use genuine replacement parts can cause a risk to users, keep the machine from operating correctly and will void the warranty.
• Be sure that all warning stickers and instructional placards applied to the product stay present and in good condition when doing maintenance or replacing components. If necessary request replacement warning stickers or placards from Nautilus customer service.
• Do not try to change the design or functionality of the machine being serviced as this can adversely effect user safety and will void the warranty.
• Do not use the machine until all shrouds, instructions, warning labels and correct functionality have been verified and tested for correct performance.
• This product contains magnets. Magnetic fields can interfere with the normal use of certain medical devices at a close range. Users may come into proximity of the magnets in the assembly, maintenance, and/or use of the product. Given the obvious importance of these devices, such as a pacemaker, it is important that you consult with your medical provider in connection with the use of this equipment. Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

Tools Required (not included)

#2 Phillips screwdriver

10mm wrench
To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

1. Unplug the power cord from the machine and wait 5 minutes.

2. Using a #2 Phillips screwdriver, remove the 2 indicated bolts from the Rear Cover.

3. Remove the Rear Cover.

4. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.

5. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the left Pivot Cover.

6. Remove the left Pivot Cover.
7. Using a #2 Phillips screwdriver, remove the indicated screw from the left Pivot Cover.

8. Remove the 5 indicated screws using a #2 Phillips screwdriver from the left Side Cover.
To assist with re-assembly, note that washers are used toward the front of the machine.

9. Slide the left Side Cover off of the machine.

**Note:** The Motor Control Board is located under the right Treadle.
11. Remove the Drive Belt. Turn the Drive Pulley clockwise while forcing the Drive Belt to the outside. Belt will come off of the Drive and Motor Pulley.

⚠️ Keep fingers out of any pinch opportunities when turning the Pulleys.

12. Using a #2 Phillips screwdriver, detach the Grounding Wire from the Motor Assembly to the Treadle Assembly.

13. Remove the indicated nuts and washers using a 10mm wrench from the Motor Assembly. There are two in front (shown) and two behind (not shown) the Motor Assembly.

14. Remove and replace with the new Motor.

15. Installation is the reverse procedure.

Drive Belt Replacement:
Wrap the new Drive Belt around the Motor Pulley. Start the Drive Belt on the Drive Pulley and roll it in a clockwise motion. Be sure the Belt does not come off of the Motor Roller.

⚠️ Keep fingers out of any pinch opportunities when turning the Pulleys.

Roll the Drive Pulley clockwise until the Drive Belt is fully installed. Continue to roll the Belt forward while adding side pressure with fingers to align as necessary.

16. Final Inspection
Inspect your machine to ensure that all hardware is tight and components are properly assembled.

⚠️ Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
Important Safety Instructions - Before servicing or using this equipment, obey the following warnings:

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

- Read and understand the Part Replacement Procedure before working on the machine. Failure to obey the instructions and safety warnings could cause injury to the service technician or bystanders.
- Keep bystanders, children and pets away from the product being serviced at all times.
- Make sure that the repair is done in an appropriate work space away from foot traffic and exposure to bystanders.
- Disconnect all power and allow to sit for 5 minutes before you service this machine.
- Some components of the equipment can be heavy or awkward. Enlist the service of a second person when you do maintenance steps involving these components. Do not try to do heavy or awkward steps on your own.
- If replacement parts are necessary, use only genuine Nautilus replacement parts and hardware. Failure to use genuine replacement parts can cause a risk to users, keep the machine from operating correctly and will void the warranty.
- Be sure that all warning stickers and instructional placards applied to the product stay present and in good condition when doing maintenance or replacing components. If necessary request replacement warning stickers or placards from Nautilus customer service.
- Do not try to change the design or functionality of the machine being serviced as this can adversely effect user safety and will void the warranty.
- Do not use the machine until all shrouds, instructions, warning labels and correct functionality have been verified and tested for correct performance.
- This product contains magnets. Magnetic fields can interfere with the normal use of certain medical devices at a close range. Users may come into proximity of the magnets in the assembly, maintenance, and/or use of the product. Given the obvious importance of these devices, such as a pacemaker, it is important that you consult with your medical provider in connection with the use of this equipment. Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

Tools Required (not included)

#2 Phillips screwdriver
To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

1. Unplug the power cord from the machine and wait 5 minutes.

2. Using a #2 Phillips Screwdriver, remove the 2 indicated screws from the Rear Cover.

3. Remove the Rear Cover.

4. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.

5. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the right Pivot Cover.

6. Remove the right Pivot Cover.
7. Using a #2 Phillips screwdriver, remove the indicated screw from the right Side Cover.

8. Tilt unit carefully onto the left side.

Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

9. Remove the 5 indicated screws using a #2 Phillips screwdriver from the right Side Cover.

10. Remove the right Side Cover.

To assist with re-assembly, note that washers are used toward the front of the machine.

11. Record the location of where each wire connects to the Motor Control Board. You will have to reattach each wire to the new Motor Control Board.
12. Disconnect the Motor Power Wires noting their location.

13. Disconnect the Tach Cable noting the location.

14. Disconnect the AC Power Wires noting their location.

15. Remove the hardware that secures the Motor Control Board.

16. Remove the Motor Control Board and replace.

17. Install the hardware that secures the new Motor Control Board.

19. Connect the Tach Cable.

20. Connect Motor Power Wires. NOTE: Red wire connects to terminal labeled “M+RED”. Black wire connects to terminal labeled “M-BLK”.

21. Connect the I/O Cable to the Motor Control Board.

22. Replace the right Side Cover.

23. With assistance, carefully set the machine upright.

   ![Warning]
   Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

24. Replace the right Pivot Cover, the Motor Cover, and the Rear Cover.

25. Replace Power Cord and test machine for proper operation. NO CALIBRATION IS NECESSARY for this model.

26. Final Inspection
   Inspect your machine to ensure that all hardware is tight and components are properly assembled.

   ![Warning]
   Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
NOTICE: This document provides instructions for the replacement of the Rear Roller on the Bowflex® TreadClimber® TC200.

If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

Given the obvious importance of these devices, such as a pacemaker, it is important that you consult with your medical provider in connection with the use of this equipment. Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

Tools Required (not included)

- #2 Phillips screwdriver
- 13mm (1/2”) socket and wrench
- 5mm wrench
- Eye Protection
- 13mm (1/2”) wrench
1. Unplug the power cord from the machine and wait 5 minutes.

2. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the left Pivot Cover.

3. Remove the left Pivot Cover.

4. Using a #2 Phillips screwdriver, remove the indicated screw from the left Side Cover.

5. Remove the 5 indicated screws using a #2 Phillips screwdriver from the left Side Cover. To assist with re-assembly, note that washers are used toward the front of the machine.

6. Slide the left Side Cover off of the machine.

**DANGER** To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.
7. Repeat the above steps on the right Pivot and Side Cover.

8. Remove the Drive Belt. Turn the Drive Pulley clockwise while forcing the Drive Belt to the outside. Belt will come off of the Drive and Motor Pulley.

   Keep fingers out of any pinch opportunities when turning the Pulleys.

9. While holding a 13mm (1/2") wrench on the Right Rear Roller Bolt steady, turn another 13mm (1/2") wrench on the Drive Pulley Bolt counterclockwise. Remove the Drive Pulley.

10. While holding a 13mm (1/2") wrench on the Right Rear Roller Bolt steady, turn another 13mm (1/2") wrench on the Drive Pulley Bolt counterclockwise. Remove the Drive Pulley.

11. Loosen the Belt Tensioning Screws on both Treadles using a 5mm hex wrench (total of 4 screws).

   Note: Be sure to record how many turns it takes to loosen the screws to assist with reassembly.
12. Remove the 3 indicated bolts from the Left Side Bearing Plate and Rear Plate using two 13mm (1/2”) wrenches.

13. Remove the Left Side Bearing Plate.

14. Remove the Snap Rings from both sides of the Rear Roller.

⚠️ To avoid possible injury, be sure to wear eye protection before removing the Snap Ring.

**Note:** The Snap Ring may be behind the Right Side Bearing Plate on some machines. If it is behind, remove the Right Side Bearing Plate before attempting to remove the Snap Ring.

15. Using a 13mm (1/2”) wrench and a 13mm (1/2”) socket and wrench, remove the 2 indicated bolts from the Left Rear Roller Bracket.

16. Remove the Left Rear Roller Bracket.
17. Slide the Rear Roller out of the belts.

18. Remove and replace with the new Rear Roller.

19. Assembly is the reverse procedure. Consult the Replace the Drive Belt procedure.

Note: Be sure to tighten the Belt Tensioning Screws the number of turns previously recorded.

Walking Belt Adjustment
The walking belts need to be adjusted if they are out of center enough to cause a rubbing or scraping sound. Adjustments can be made at the Front Roller of each Treadle (Item A).

Belt Alignment Check – Stand adjacent to the unit and set the speed to 1.5 MPH. The alignment adjustment bolts are on the front end of each Roller. If the belt is tracking too far to the right, use a 5mm hex wrench to turn the right adjustment bolt clockwise on that belt in full turn increments. If the belt tracks too far to the left, do the same thing on the left adjustment bolt.

Note: Do not turn the bolts counterclockwise when you adjust the belt alignment.

Belt Tension Adjustment – Check the belt tension only when the machine is unplugged. From the belt’s midpoint, a correctly tensioned belt should only have an inch of give. To check, pull the belt upward at its midpoint and measure the distance to the deck. If the distance is more than an inch, the belt is loose. To tighten, turn both bolts clockwise one-half a turn and check tension again. Repeat this step if necessary. Be sure not to overtighten the belts.

Note: Bolts are turned counterclockwise equally to decrease belt tension.

20. Final Inspection
Inspect your machine to ensure that all hardware is tight and components are properly assembled.

Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
**Tools Required (not included)**

- #2 Phillips screwdriver
- 13mm (1/2”) wrench
- 5mm hex wrench
To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.

1. Unplug the power cord from the machine and wait 5 minutes.

2. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Rear Cover.

3. Remove the Rear Cover.

4. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.

5. On the Motor Control Board (MCB), disconnect the Lower Input/Output (I/O) Cable by pulling straight out on the Connectors – do not pull on the wire itself. Push the cable out of the Motor compartment and into the Base Assembly.
6. Using a 5mm hex wrench, remove the lower mounting screw from the Shocks. Leave the top attached.

7. Disconnect the Shocks from the Treadles, and lower the Treadles gently.

   The Treadle will fall abruptly if not supported. Keep hands away from the inside of the Treadles to avoid possible serious injury.

8. Using a 13mm (1/2”) wrench, remove the indicated bolts from both sides of the Treadle Assembly.

9. Carefully lift the front of the Treadle Assembly onto the Transport Wheels. Roll the Treadle Assembly off of the rear of the machine.

   **Note:** THIS STEP REQUIRES TWO PEOPLE.

   Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

   The Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the edges of the Walking Belts.

10. Installation is the reverse procedure.

11. Final Inspection

    Inspect your machine to ensure that all hardware is tight and components are properly assembled.

    Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
Replace the Virtual Pivot on the Bowflex® TreadClimber® TC200

NOTICE: This document provides instructions for the replacement of the Virtual Pivot on the Bowflex® TreadClimber® TC200. If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

Tools Required (not included)

- #2 Phillips screwdriver
- (2) 13mm (1/2") wrench
- 5mm hex wrench

Important Safety Instructions - Before servicing or using this equipment, obey the following warnings:

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

- Read and understand the Part Replacement Procedure before working on the machine. Failure to obey the instructions and safety warnings could cause injury to the service technician or bystanders.
- Keep bystanders, children and pets away from the product being serviced at all times.
- Make sure that the repair is done in an appropriate work space away from foot traffic and exposure to bystanders.
- Disconnect all power and allow to sit for 5 minutes before you service this machine.
- Some components of the equipment can be heavy or awkward. Enlist the service of a second person when you do maintenance steps involving these components. Do not try to do heavy or awkward steps on your own.
- If replacement parts are necessary, use only genuine Nautilus replacement parts and hardware. Failure to use genuine replacement parts can cause a risk to users, keep the machine from operating correctly and will void the warranty.
- Be sure that all warning stickers and instructional placards applied to the product stay present and in good condition when doing maintenance or replacing components. If necessary request replacement warning stickers or placards from Nautilus customer service.
- Do not try to change the design or functionality of the machine being serviced as this can adversely effect user safety and will void the warranty.
- Do not use the machine until all shrouds, instructions, warning labels and correct functionality have been verified and tested for correct performance.
- This product contains magnets. Magnetic fields can interfere with the normal use of certain medical devices at a close range. Users may come into proximity of the magnets in the assembly, maintenance, and/or use of the product. Given the obvious importance of these devices, such as a pacemaker, it is important that you consult with your medical provider in connection with the use of this equipment. Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.
1. Unplug the power cord from the machine and wait 5 minutes.

2. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Rear Cover.

3. Remove the Rear Cover.

4. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.

5. On the Motor Control Board, disconnect the Lower Input/Output (I/O) Cable by pulling straight out on the Connectors – do not pull on the wire itself. Push the cable out of the Motor compartment and into the Base Assembly.
6. Using a 5mm hex wrench, remove the lower mounting screw from the Shocks. Leave the top attached.

7. Disconnect the Shocks from the Treadles, and lower the Treadles gently.

⚠️ The Treadle will fall abruptly if not supported. Keep hands away from the inside of the Treadles to avoid possible serious injury.

8. Using a 13mm (1/2") wrench, remove the indicated bolts from both sides of the Treadle Assembly.

9. Carefully lift the front of the Treadle Assembly onto the Transport Wheels. Roll the Treadle Assembly off of the rear of the machine.

**Note:** THIS STEP REQUIRES TWO PEOPLE.

⚠️ Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

⚠️ The Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the edges of the Walking Belts.
10. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the left Pivot Cover.

11. Remove the left Pivot Cover.

12. Using a #2 Phillips screwdriver, remove the indicated screw from the left Side Cover.

13. Slide the left Side Cover off of the machine. To assist with re-assembly, note that washers are used toward the front of the machine.

14. Remove the 5 indicated screws using a #2 Phillips screwdriver from the left Side Cover.

Note: To assist with re-assembly, note that washers are used toward the front of the machine.

15. Slide the left Side Cover off of the machine.
16. Remove the Drive Belt. Turn the Drive Pulley clockwise while forcing the Drive Belt to the outside. Belt will come off of the Drive and Motor Pulley.

⚠️ Keep fingers out of any pinch opportunities when turning the Pulleys.

17. While holding a 13mm (1/2”) wrench on the Right Rear Roller Bolt steady, turn another 13mm (1/2”) wrench on the Drive Pulley Bolt counter-clockwise. Note the orientation of the Drive Pulley with the Round Magnet on the inside.

18. Loosen the Belt Tensioning Screws on both Treadles using 5mm hex wrench (total of 4 screws).

Note: Be sure to record how many turns it takes to loosen the screws to assist with reassembly.
19. Remove the 4 indicated screws using two 13mm (1/2") wrenches.

20. Remove the 3 indicated bolts from the Side Bearing Plate and Rear Plate using two 13mm (1/2") wrenches. Repeat on other side of machine.

21. Remove the Side Bearing Plates and Rear Plate from the Bearing.

22. With the help of another person, invert the Treadle Assembly.

⚠️ Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

⚠️ The Treadle will fall abruptly if not supported. Keep hands away from the inside of the Treadles to avoid possible serious injury.

⚠️ The Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the edges of the Walking Belts.
23. Remove the 2 indicated bolts from the Virtual Pivot using two 13mm (1/2") wrenches.

**Note:** When removing the Virtual Pivot, take note of the orientation. It must be replaced with the same orientation.

24. Install the IGUS (“hat” shaped) bushings into the pivot arms.

25. Install the metal spacers/washers into the bushings.
26. Add the washers to both sides of the Center Block as the bolt is installed. Tighten only until the nut has bottomed out on the metal spacers/washers.

**Note:** Do not overtighten. Excessive tightening will cause the metal spacer to crack.

27. Remaining assembly is the reverse procedure.

28. Final Inspection

Inspect your machine to ensure that all hardware is tight and components are properly assembled.

⚠️ Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
NOTICE: This document provides instructions for the replacement of the Walking Belts on the Bowflex® TreadClimber® TC200. If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

Tools Required (not included)

- #2 Phillips screwdriver
- Cir-Clip Pliers
- (2) 13mm (1/2”) wrenches
- Eye protection
- 5mm hex wrench
1. Unplug the power cord from the machine and wait 5 minutes.

2. Using a #2 Phillips Screwdriver, remove the 2 indicated screws from the Rear Cover.

3. Remove the Rear Cover.

4. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.

5. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the right Pivot Cover.

6. Remove the right Pivot Cover.
7. Using a #2 Phillips screwdriver, remove the indicated screw from the left Side Cover.

8. Using a #2 Phillips screwdriver, remove the 5 indicated screws from the left Side Cover.

To assist with re-assembly, note that washers are used toward the front of the machine.

9. Using a #2 Phillips screwdriver, remove the 4 bolts holding the Treadle Stop to the Left Treadle. There are two bolts on each side of the Treadle.

10. Remove the Treadle Stop.
11. Remove the Drive Belt. Turn the Drive Pulley clockwise while forcing the Drive Belt to the outside. Belt will come off of the Drive and Motor Pulley.

⚠️ Keep fingers out of any pinch opportunities when turning the Pulleys.

12. Using a 5mm hex wrench, remove the Belt Tensioning Screws and Brackets from the Front Roller.

**Note:** Be sure to record how many turns it takes to remove the screws to assist with reassembly. Also note the orientation of the Brackets. The larger Bracket is to the outside of the machine.

13. Remove the Front Roller from the belt.

14. While holding a 13mm (1/2") wrench on the Right Rear Roller Bolt steady, turn another 13mm (1/2") wrench on the Drive Pulley Bolt counter-clockwise. Remove the Drive Pulley.
15. Remove the two indicated bolts from the Rear Plate using a 5mm hex wrench.

16. Remove the 2 bolts from the Left Side Bearing Plate using two 13mm (1/2") wrenches.

17. Using Cir-Clip Pliers, remove the Snap Ring from the Rear Roller Assembly.

   To avoid possible injury, be sure to wear eye protection before removing the Snap Ring.

18. Using a 13mm (1/2") wrench and a 13mm (1/2") socket, remove the 2 indicated bolts from the Left Side Bearing Plate.

19. Remove the Left Rear Roller Bracket from the Rear Roller.

20. Using a 5mm hex wrench, remove the indicated hardware from the Shock.

21. Disconnect the Shock from the Treadle, and lower the Treadle gently.

   The Treadle will fall abruptly if not supported. Keep hands away from the inside of the Treadles to avoid possible serious injury.
22. Carefully slide the Walking Belt off of the deck.

23. Follow the same procedure for replacing the right Walking Belt.

24. Installation is the reverse procedure. Consult the Replace the Drive Belt procedure.

Note: Be sure to tighten the Belt Tensioning Screws the number of turns previously recorded.

25. With the Belt Tensioning Screws and Brackets replaced, check the walking belt tension. To check, pull the belt upward at its midpoint and measure the distance to the deck. If the distance is more than an inch, the belt is loose. To tighten, turn both bolts clockwise one-half a turn and check tension again. Repeat this step if necessary. Be sure not to overtighten the belts.

26. Inspect the alignment of the Walking Belts. If the belt is tracking too far on a side, turn the Belt Tensioning Screw on that side a full turn.

27. Plug in the fitness machine into an appropriately rated outlet.

Note: The TC200 TreadClimber® fitness machine is designed to plug directly into a properly wired and grounded three prong 120V outlet. If you connect the machine to an outlet with GFI (ground fault interrupt) or AFI (arc fault interrupt), machine operation can cause the circuit to trip.

28. Standing adjacent to the machine, turn on the belts and run at 1.5 mph for about a minute.

29. Inspect the alignment. If necessary, continue to adjust the Belt Tensioning Screw until aligned.

30. Final Inspection
Inspect your machine to ensure that all hardware is tight and components are properly assembled.

Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
Replacing a Walking Deck on the Bowflex® TreadClimber® TC200

NOTICE: This document provides instructions for the replacement of a Walking Deck on the Bowflex® TreadClimber® TC200.

If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

Important Safety Instructions - Before servicing or using this equipment, obey the following warnings:

This icon means a potentially hazardous situation which, if not avoided, could result in death or serious injury. Read and understand all Warnings on this machine.

• Read and understand the Part Replacement Procedure before working on the machine. Failure to obey the instructions and safety warnings could cause injury to the service technician or bystanders.
• Keep bystanders and children away from the product being serviced at all times.
• Make sure that the repair is done in an appropriate work space away from foot traffic and exposure to bystanders.
• Disconnect all power and allow to sit for 5 minutes before you service this machine.
• Some components of the equipment can be heavy or awkward. Enlist the service of a second person when you do maintenance steps involving these components. Do not try to do heavy or awkward steps on your own.
• If replacement parts are necessary, use only genuine Nautilus replacement parts and hardware. Failure to use genuine replacement parts can cause a risk to users, keep the machine from operating correctly and void the warranty.
• Be sure that all warning stickers and instructional placards applied to the product stay present and in good condition when doing maintenance or replacing components. If necessary request replacement warning stickers or placards from Nautilus customer service.
• Do not try to change the design or functionality of the machine being serviced as this can adversely effect user safety.
• Do not use the machine until all shrouds, instructions, warning labels and correct functionality have been verified and tested for correct performance.
• This product contains magnets. Magnetic fields can interfere with the normal use of certain medical devices at a close range. Users may come into proximity of the magnets in the assembly, maintenance, and/or use of the product. Given the obvious importance of these devices, such as a pacemaker, it is important that you consult with your medical provider in connection with the use of this equipment. Please consult the “Safety Warning Labels and Serial Number” section in the Owner’s Manual to determine the location of the magnets on this product.

Tools Required (not included)

#2 Phillips screwdriver

5mm hex wrench
1. Unplug the power cord from the machine and wait 5 minutes.

2. Using a #2 Phillips Screwdriver, remove the 2 indicated screws from the Rear Cover.

3. Remove the Rear Cover.

4. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.

5. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the right Pivot Cover.

6. Remove the right Pivot Cover.

To reduce the risk of electrical shock or unsupervised usage of the equipment, always unplug the power cord from the wall outlet and the machine and wait 5 minutes before cleaning, maintaining or repairing the machine. Place the power cord in a secure location.
7. Using a #2 Phillips screwdriver, remove the indicated screw from the left Side Cover.

8. Tilt the machine carefully onto the right side.

Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

9. Using a #2 Phillips screwdriver, remove the 5 indicated screws from the Side Cover.
To assist with re-assembly, note that washers are used toward the front of the machine.

10. Slide the Side Cover off of the machine.

11. Using the 5mm hex wrench, loosen the Belt Tensioning Screws on both Treadles (2 screws on each Treadle).

Note: Be sure to record how many turns it takes to loosen the screws to assist with reassembly.
12. Using a #2 Phillips screwdriver, remove the 6 indicated screws from each of the Foot Support Platforms.

13. With assistance, carefully set the machine upright.

⚠️ Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

14. With the Walking Belt loose, shift the belt to the center of the machine and remove the 3 deck screws and 1 belt guide screw using a #2 Phillips screwdriver.

15. Shift the belt to the outside and remove the 4 deck screws using a #2 Phillips screwdriver.
16. Lift the belt slightly and slide the Walking Deck out from under the belt.

17. Slide the new deck in with the laminated side facing up.

18. Repeat procedure on the other side of machine if replacing both Walking Decks.

19. Installation is the reverse procedure.

Note: Be sure to tighten the Belt Tensioning Screws the number of turns previously recorded.

20. With the Belt Tensioning Screws and Brackets replaced, check the walking belt tension. To check, pull the belt upward at it’s midpoint and measure the distance to the deck.

If the distance is more than an inch, the belt is loose. To tighten, turn both bolts clockwise one-half a turn and check tension again. Repeat this step if necessary. Be sure not to over-tighten the belts.

21. Inspect the alignment of the Walking Belts. If the belt is tracking too far on a side, turn the Belt Tensioning Screw on that side a full turn.

22. Plug in the fitness machine into an appropriately rated outlet.

Note: The TC200 TreadClimber® fitness machine is designed to plug directly into a properly wired and grounded three prong 120V outlet. If you connect the machine to an outlet with GFI (ground fault interrupt) or AFI (arc fault interrupt), machine operation can cause the circuit to trip.

23. Standing adjacent to the machine, turn on the belts and run at 1.5 mph for about a minute.

24. Inspect the alignment. If necessary, continue to adjust the Belt Tensioning Screw until aligned.

25. Final Inspection
Inspect your machine to ensure that all hardware is tight and components are properly assembled.

Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
Reset the Console on the Bowflex®
TreadClimber® TC100/TC200

NOTICE: This document provides instructions to reset the Console to the manufactured settings on the Bowflex® TreadClimber® TC100/TC200. Be aware that all information will be erased on the Console.

If you need assistance, please call Bowflex Customer Service at 1-800-605-3369.

NOTICE: With a reset of the Console, all User Profile settings and previous Workouts will be erased from the Console. This information is not retrievable after a reset.

1. With the machine at the Power-Up Mode screen, push and hold down the STOP/PAUSE button and the Right button for 3 seconds to go into the Machine Settings Mode.
   Note: Push STOP/PAUSE to exit the Machine Settings Mode and return to the Power-Up Mode screen.
2. The Console display shows the SET DATE prompt with the current date setting.
3. Push the Right button until the next prompt is displayed.
4. The Console display shows the SET TIME prompt with the current time setting.
5. Push the Right button until the next prompt is displayed.
6. The Console display shows the Firmware Version prompt.
7. Push the Right button.
8. The Console display shows the current MCB Version.
9. Push the Right button.
10. The Console display shows the VIEW ERROR MESSAGES prompt. Push the ENTER button to select this option. The Console display shows ERROR VERSION X. Push the Right arrow button to view the error codes.
11. Push STOP/PAUSE to exit the error log, or push the Right button for the next prompt.
12. The Console displays the RUN HOURS for the machine.
13. Push the Right button.
14. The Console displays the CONSOLE RESET prompt. Console Reset erases the settings of the User Profiles and all Workouts.
15. Push ENTER.
16. The Console will display CONSOLE RESET NO. Push the Burn Rate/Increase button to change to the CONSOLE RESET YES option.
17. Push ENTER.
   The Console will reset to factory settings, and will display the Power-Up Mode screen.
18. Push STOP/PAUSE to exit the Machine Settings Mode and return to the Power-Up Mode screen.

3. Remove the Rear Cover.

4. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the Motor Cover. Lift up on the front of the Motor Cover, releasing it from the Base Assembly. Slide the Motor Cover out from beneath the Treadles.

5. Using a #2 Phillips screwdriver, remove the 2 indicated screws from the right Pivot Cover.

6. Remove the right Pivot Cover.
7. Using a #2 Phillips screwdriver, remove the indicated screw from the right Side Cover.

8. Tilt unit carefully onto the left side.

\[ \text{Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.} \]

9. Remove the 5 indicated screws using a #2 Phillips screwdriver from the right Side Cover.

10. Remove the right Side Cover.
    To assist with re-assembly, note that washers are used toward the front of the machine.

11. Inspect all wires and cables that connect to the Motor Control Board. Be sure they are all fully connected to the Motor Control Board (MCB).
12. Replace the right Side Cover.

13. With assistance, carefully set the machine upright.

![Warning] Do not move the machine without aid. Injury to you or damage to the machine can occur. The Treadles and Walking Belts can abruptly move. To avoid possible serious injury, keep hands away from the inside of the Treadles and the edges of the Walking Belts.

14. Replace the right Pivot Cover, the Motor Cover, and the Rear Cover.

15. Replace Power Cord and test machine for proper operation. NO CALIBRATION IS NECESSARY for this model.

16. Final Inspection

Inspect your machine to ensure that all hardware is tight and components are properly assembled.

![Warning] Do not use until the machine has been fully assembled and inspected for correct performance in accordance with the Owner’s Manual.
